FURNITURE

We were enjoying a nice business in Simmons' Beds until the firm decided the farmers had no right to buy Furniture through their own store.

However, on our recent trip we were able to arrange to get all these famous Beds we desired, and also made arrangements to get Furniture of any kind at prices that are real interesting and satisfactory.

We can now furnish anything in Furniture from Kitchen necessities to fine House Furnishings.

We can give you a Bedroom Suite,
A Living Room Suite,
A Dining Room Suite,
A Chesterfield, or any piece of Furniture you desire at a saving on price, and get it for you in five days.

See us for your Furniture requirements.

Herald Golf Final Meet Opens Friday

Champions from 16 Different Districts Compete in Three-Day Tourney

Plans for the staging of the final tournament of the Calgary Herald's district golf competition are being worked out. The tourney will take place September 17, 18, 20.

Champions from 16 different districts in Alberta, British Columbia and Saskatchewan are being decided, decisions in two areas being settled over the week-end. Delay has been occasioned by the inclement weather.

The Herald golf competition is the first of its kind ever organized in the province, and it has created a great deal of interest amongst the members of the smaller clubs in country districts. It is with the object of stimulating golfing enthusiasm amongst these country players that the Herald initiated the event, and it has proven a great boon to the sport.

Sixteen Players Compete

Sixteen players will go into the competition, and the final will be decided on the third day. Cups will be awarded to the champion and the winner in the consolation round. Prizes are also to be issued for the district champions. These awards will be presented during the course of the event.

These players are being brought to Calgary as guests of the Herald. They qualified for the right to enter this final tournament by virtue of their triumph in the districts' contests, medal round deciding the issue in each case

Hand Hills Constituency of Women's Institutes

An unusually interesting program is arranged for the 9th annual conference of the Hand Hills Constituency of Women's Institutes, to be held in Knox Church, Drumheller, Monday, October 4th, 1926. The morning session is at 9:30 a.m., and the afternoon session at 2 p.m.

Mr. Calhoun, of the Calgary Public Library, is to address the conference on some phase of "Canadian Literature," and review some recent Canadian production.

Mrs. J. F. Price, Calgary Provincial Publicity Convener of A.W.I. comes to report the judged section in the Short Story Contest, and read the prize story. Mrs. Price will also speak of the "Alberta Dinner Table" at the Dominion Exposition, Toronto, of which she and Mrs. Rodgers were in charge, and from where she has recently returned.

Miss MacMillan, Edmonton, Director of Women's Extension Bureau for the poor, and Mrs. Montgomery, Wetaskiwin, Dir. Dist. No. 3 of A.W.I., will deliver addresses.

Mrs Gibson, Constituency Convener, requests that the conveners of standing committees do not prepare formal addresses, but simply give the delegates some hints as to what they wish them to carry out in their Institutes along their lines of work, and urging the importance of reporting to them.

The reports of Standing Committees are likely to be placed on the program of the morning session, while the reports of Institutes are on the afternoon session. Special music will be interspersed.

The Drumheller W.I will entertain the conference at luncheon.

Much interest will centre in the reports of the various contests, along with the three constituency contests of (1), "A Model Farm Kitchen," prizes donated by Verdant Valley W.I.; (2), "A Short Story Contest," prizes donated by Drumheller W.I.; (3), "A Week's Menu for a Family of Five," prizes donated by Munson W.I.

Mrs. Vallery, Constituency W.I.-G.G. convener, is donating prizes of $3 00, $2 00, $1 00, for the best essay on the W.I.-G.G., 1926 Camp, held at Red Deer River.

In every way this promises to be a very profitable and enjoyable conference.

PARENT TEACHERS' ASSOCIATION MEET

The first meeting of the Parent Teachers' Association was held in the Delia United Church on Monday night, September 13th.

The meeting was called to order by the chairman, Dr. Kydd, and there was a large attendance of pupils, parents, and others.

The first business to come before the meeting was recognition of six students in High School making full passes in the last examination. The Chairman called upon Mr. Drake, the principal, to donate the specially printed cards, the first names called being Beatrice Anderson, Calvin Cobb, Agnes King, Eileen Reid, etc. These four pupils, however, are now attending school in Calgary, and therefore unable to be present, recognition being passed to the parents.

Mr. Haverstock, School Inspector, gave a very eloquent talk on "Vocation in Life," laying before the students that they should think very carefully about what they are best fitted for in life. The speaker was given a very attentive hearing.

Rev. J. R. Gesson, pastor of the Delia United Church, also gave an interesting talk.

Mr. A. Morrison, the secretary, also spoke, and read the minutes of the last meeting.

Mr. Fred Anderson, school trustee, addressed a few words of welcome and encouragement to the teachers and pupils.

Mrs. A. S. Newcombe, first vice-president, then occupied the chair, in place of Dr. Kydd, who was called away, when a discussion took place relative to the working of the association, in which Mrs. Hamilton, Mr. Newcombe, Mr. Drake and Mr. Haverstock took part. Miss L. Eldridge, one of the new lady teachers, also voiced an opinion, after which the chadame chairman called for a new election of officers for the ensuing year, which resulted as follows:—

President—Mr. Drake.
First Vice-President — Mrs. Geo. Martin.
Second Vice-President — Mrs W. Barne.
Secretary-Treasurer—Mrs. A. S. Newcombe.
Programme Committee — Mr. A. S. Newcombe.
Reception Committee— Mrs. Roy Speelman.
Improvement Committee — Mrs. Fred Anderson.

Excellent tea, coffee, sandwiches and cake were served by the ladies, and a most successful meeting came to a close by singing "God Save the King."

ALBERTA CELEBRATES HER ANNIVERSARY

The Province of Alberta on September 1st celebrated the twenty first anniversary of its creation as a Province of Canada. Various functions commemorating the event took place throughout the province, including radio addresses by prominent men, including Dr. A. C. Rutherford, first Premier of the Province; Hon. Geo. Hadley, Minister of Agriculture; and present Acting Premier, and others.

During its 21 years the province has increased in population from less than 200,000 to 640,000. Its area in wheat has grown from 220,000 acres to 6,000,000 acres, and the area in all crops has grown from 616,000 acres to 11,000,000 acres. The estimated value of agricultural products has grown from $20,000,000 to $256,000,000, and the dairy industry alone has grown from very small proportions to the production value of more than $20,000,000 annually. Coal production has grown from less than one million tons to seven millions, and industrial establishments have increased from 97 to over 2,000. School enrolment has grown from 28,000 to 148,000, and the number of schools from 400 to over 3,000. Telephones have increased in number from less than 3,000 to over 65 000, and automobiles from the small beginning of 56 to a total of over 62,000.

WORLD POULTRY SHOW PLANNED

Sixteen foreign countries have already accepted invitations to send delegates to the world's poultry congress to be held in Ottawa next summer, it was stated at a meeting of the congress preparatory committee at the Canadian National Exhibition last Friday. Reports also were received from committee members on different features of the congress, and all reported progress in their work of arranging for the largest gathering of poultry authorities that has ever taken place in the Dominion.

The United States has agreed to send 1,000 examiners to take part in the tour which is being arranged from United States border points to Ottawa, and the American Poultry Association will stage one of the largest foreign exhibits to be presented at the congress.

Russia is sending a large delegation.

Royalty will be represented at the show, the Prince of Wales having decided to exhibit.

Lord Willingdon, Canada's new governor-general, will be the chief patron of the congress.

Invitations have been made to take a number of the foreign delegates on a tour of Canada from coast to coast.

Toronto Wants Alberta Coal

Thos. Foster, Mayor of Toronto, stated on last Friday that in behalf of the city he is endeavoring to secure a part of the shipment of 5,000 tons of Alberta coal at $11 per ton, which is to be brought to Ontario by arrangement between Premier Ferguson and Hon. R. B. Bennett, federal minister of finance.

His worship said he was in correspondence with the government regarding the matter.

Speaking over the radio on Friday night, Mr. Bennett, U.F.A. candidate for Bow River, claimed that it was the U.F.A. members in the Ottawa house that had been instrumental in bringing about the present inquiry of the Board of Railway Commissioners into the question of the movement of Alberta coal to the east.

Mr. Bennett said that there was no credit due to Hon. R. B. Bennett in connection with the three trainloads of coal for test purposes that were to be moved shortly from the Drumheller and Edmonton districts. The Board of Railway Commissioners held a preliminary hearing last spring, but as a result of a request on the part of the railways the hearing was postponed until this month.

The Golden Rule: "As ye would that men should do to you, do ye also to them.—Luke 6 : 31.

WHEAT POOL SUING OVER NON-DELIVERY

Enters Action Against Farmer Who Agreed but Failed to Consign His Wheat.

The Alberta Co-operative Wheat Producers Limited, otherwise the Wheat Pool, has entered action in the Supreme Court of Alberta, against Hartvig Holmberg, a farmer resident near Hardisty, Alberta, in which the plaintiff seeks to recover $1,000 as damages for breach of a contract entered into between the plaintiff and the defendant, on August 21, 1923.

By the terms of this agreement the defendant agreed to consign to the plaintiff company for sale, all of the wheat produced or acquired by him during the years of 1923-24-25-26 and 27. As it was held to be impracticable to ascertain the exact damages that would be suffered by the plaintiff company in any breach of the contract, it was agreed between the parties that the sum of 25 cents per bushel should be taken as liquidated damages.

The defendant having failed to consign to the company his crop of wheat raised by him in the fall of 1925, amounting to 4,000 bushels, the plaintiff is suing for $1,000. Messrs. Muir, Rankine and Hall, are solicitors for the Wheat Pool, the plaintiffs.

MOTOR FUEL MADE FROM SUGAR

Motor fuel from sugar is one of the latest achievements of chemistry. A joint conference on power alcohol was held recently at the Congress of Chemists in London, England under the chairmanship of Sir Thomas Holland, rector of the Imperial College of Science at Kensington.

A paper was submitted on "Experiences with Alcohol Motor Fuel" by J. D. Ross and Dr. W. R. Ormandy. Economic considerations, it was stated, pointed to the first utilization of alcohol fuels in tropical and sub-tropical countries where sugar, starch and cellulose were rapidly and cheaply produced.

The first really large scale experiment on these lines was being carried out in Queensland, Australia, where a plant for the production of 2,000,000 gallons of fuel per annum was now being erected and the necessary steps were being taken for the erection of three further plants.

The raw material to be employed in those plants were molasses from the sugar plantations and starchy products such as cassava or sweet potato.

Active experimental work was being carried out with fermentation processes for the production of motor fuels from green cellulose and the conversion of the cellulose from sawdust into fermentation bodies.

Card of Thanks

We wish to offer our heartfelt thanks to all who showed us so many acts of kindness and sympathy; also to the Delia Ladies' Aid, Women's Institute, Junior Institute, and the many kind friends who sent flowers in our recent and bereavement.

Mr. and Mrs. Geo. Lowe
and Family.

MORE ELEVATORS ARE TAKEN OVER

Alberta Wheat Pool Extends Operations for These Facilities

Contracts have been let by the Alberta Wheat Pool for the construction of country elevators at Marwayne and Streamstown, on the Canadian Pacific line northwest from Lloydminster, and at Hill Spring and Glenwoodville on the Canadian Pacific branch line west of Cardstown, it was stated at the offices of the pool last week. Two elevators have also been purchased, one at Scollard on the Canadian National, north of Munson, and the other at Sunnynook, previously owned by the Home Grain Company, respectively. These bring the total number of elevators under the direct control of the pool to forty.

The membership, it was stated, was daily increasing, as many as 20 new contracts being received by one mail alone on Tuesday week.

Full Steam Ahead

Within a few days of the writing of this article the electors of Canada will journey to the polls in order to select their representatives in a new House of Commons and thereby also determine the political complexion of the Government. Before this article appears in print the verdict of the ballots will have been rendered.

Whatever that verdict may be, and at the time of writing it is very decidedly in doubt, it is to be hoped that it will be sufficiently decisive one way or the other to give the successful party a fair working majority in the next Parliament. It is in the interests of Canada that stable government be re-established and unquestionably the great majority of the people wish it.

Economic conditions throughout the Dominion are very satisfactory at the present time, business is good and prosperity is all that could be desired. If its branches is active, trade is rapidly expanding, and increased prosperity is everywhere apparent. What Canada now requires is not only maintain but to further advance these conditions, is a renewal of the era of good and confidence in government which has existed as a result of the stalemate in Parliament.

A young country like Canada can ill afford to "drift" at any time, but at no time is such a policy, or rather lack of policy, quite so dangerous as during those periods when decision and vigorous aggressive action are necessary in order to take advantage of the opportunities.

Quite apart from all partisan considerations, or whether Mackenzie King or Arthur Meighen head the Government, there are certain policies which the present and future welfare of Canada demands should be carried out and further developed. They may well constitute fundamental planks in the programme of all Canadian Governments, and it is to be earnestly hoped that a "drift" policy will be placed in office sufficiently strong to carry them out. Failing the creation of such a Government, both parties might well unite to give effect to them.

In the first place, the policy which has been developed during the past few years, and for which Hon. Mr. Robb certainly deserves great credit, of negotiating trade arrangements with various countries should be persevered in. The principle of reciprocity in commodities should be followed to the utmost extent possible which would result in opening doors and creating wider markets abroad for Canadian goods. It is not a protective tariff designed to shut out foreign goods out of Canada that has brought present prosperity to manufacturers and the Labor Party might, but the establishment of an export trade for exceeding anything hitherto known, and building up a favorable balance of trade mounting up into the hundreds of millions of dollars. Last Year the balance of trade was in favor of Canada to the extent of goods were exported from Canada than were imported. This record should be maintained, and the favorable margin steadily increased. It can be done through the development of foreign markets and the making of more advantageous trade agreements whereby such markets will be opened to Canada.

Secondly, unremitting attention should be devoted to the question of immigration. Close and expert study of every angle of this large subject should continue without any interruption, and necessary legislation passed, if necessary, to secure a large, steady and efficient stream of settlers of the right type fitted, all to the end that an ever increasing stream of settlers may be located here to till the fertile agricultural lands and develop the many other resources of natural wealth of which the Dominion is so rich. There is no room for, and no reason for, party politics in dealing with this essentially great nation-building programme.

While Canada must continue to rely on a large revenue for the Federal Government in order to meet and discharge our war obligations, further reduction in taxation should be made so as to relieve the individual taxpayer and release capital for profitable and productive enterprise. The Canadian people buying power of the people following tax reductions, the added money thereby given to business and in lieu of industrial activity resulting in increased employment, will, in the final analysis, be saved many times over to the Government will receive quite as large a revenue in the aggregate with such each individual contribution will be smaller.

There are other questions which call for definite action, but these three outstanding subjects of national importance should not be neglected no matter what the complexion of the next Parliament and Government may be. Furthermore, the Government should be formed by the party which can command a majority in the House of Commons. Lastly, the Government, whether under Mr. Rich or Mr. Meighen, should be accorded support by the people as a whole in a united endeavour to give stability in government, sound administration, and vigorous action along broad lines of Canadian advancement.

Canada Has Right Idea

People Believe National Progress is Centred in Homes

Canadians are a bit old-fashioned. So the Ladies' Home Journal says. They think that national progress is centred in the homes, not in the banks. They generally believe that the Panama Canal zone is a recent rulin of the district court.

The important legal victory of the bovine sorority was scored when the court dismissed the suit of a motorist of the race of Shakespeare and Milton, and his automobile damaged when he drove into an unlighted cow on the highway.

In bringing suit against the Panama Railway Company, owner of the cow, the driver alleged the company was negligent "in allowing the cow to stray upon the highway in a negligent and unlawful manner, without attendants or other means of warning vehicles lawfully using such highway; and, furthermore, that the cow was not equipped with any warning devices in the nature of a bell, bead or tail lights."

Dismissing the suit, the court ruled that the plaintiff had failed to prove the cow was an unlawful obstruction, and added that there is no law in the Canal Zone requiring animals on the highways to be equipped with any of the devices which the motorist suggested so surely.

Motorist Lost Damage Suit

Cows Need No Warning Devices According to Panama Court

Hundreds of miles of the railways and freedom from such burdensome appurtenances as bells, tail lights and other similar warning devices has been assured cows since old. It is a law of the Canal Zone by a recent ruling of the district court.

The important legal victory of the bovine sorority was scored when the court dismissed the suit of a motorist of the race of Shakespeare and Milton, and his automobile damaged when he drove into an unlighted cow on the highway.

In bringing suit against the Panama Railway Company, owner of the cow, the driver alleged the company was negligent "in allowing the cow to stray upon the highway in a negligent and unlawful manner, without attendants or other means of warning vehicles lawfully using such highway; and, furthermore, that the cow was not equipped with any warning devices in the nature of a bell, bead or tail lights."

Dismissing the suit, the court ruled that the plaintiff had failed to prove the cow was an unlawful obstruction, and added that there is no law in the Canal Zone requiring animals on the highways to be equipped with any of the devices which the motorist suggested so surely.

City To Build River

Having built a bridge at a cost of $125,000, Ottawa, a town in Kansas, now proposes to get a river under it. The steel and concrete structure over the Marais des Cygnes was recently completed. Now a mire has been started to make over the river in keeping with the bridge.

Ancient Sixth Found

A skull said to be 40,000 years old has been found at Gibraltar and was shipped to England for the meeting of the British Association at Oxford. Another skull, discovered in the vicinity in 1840, was said to be a remnant of the Neanderthal race.

Many shady reputations are due to the casting of reflections.

A Ruby Of Great Value

Human Image Is Seen In Jewel Found In India

Real rubies, sparkling like drops of pigeon's blood, are beautiful jewels. But when one discloses, inside, a portrait made not by human hands, but by nature, it is unique and of surpassing value. Such a ruby has been found by a member of the Bengal legislative council. The native considers it a gift of God, and the jewel assumes an importance that cannot be estimated in terms of cash.

The stone is not large, but inside the outer surface, deep down behind a scarlet cloud, appears a tiny image of a man, dressed in white, with a darkish brown face and deep brown eyes. The man is seen wearing a white puggree (part of the national dress of the Hindus) and the rest of his body is covered by deep folds of flowing white cotton.

The more closely the gem is examined the more the image comes out in detail. The ruby was sent to the director of the geological department in India, who pronounced it a real ruby of high value. He could not explain the portrait and can be called in a freak of nature without a parallel.

For Aches, Pains, The Safe Home Remedy NERVILINE

When sudden sickness comes, when the kiddies come in with colds, their little throats and throat sore from coughing, quick results always follow the thorough rubbing with good old Nerviline. If it's Cramps, Colic, Diarrhoea, Nerviline is a wonderful friend. It brings relief and comfort so quickly. For young and old, to overcome the illness that threatens to enter the home, nothing compares with "Nerviline"—35 cents at all dealers.

Daggers Loaned To Tower of London

Used By Men Who Once Attempted Theft of British Crown Jewels

Two daggers, said to be those used by Colonel Blood and Parrot when they made an attempt to steal the crown jewels in 1671, have been deposited on loan in the Armouries of the Tower of London by the Royal Glenger Library.

In one of the accounts of the attempt it was stated that Blood had wounded Talbot, the keeper of the jewels, with his dagger.

The weapons were bequeathed in 1911 by Sir Augustus Meredyth Henry Thomas Nevison, a relative of Sir Isaac Newton. They are of the type known as "Scottish Whinger," which was in favor from the end of the fourteenth to the beginning of the seventeenth century.

It will be recalled that Blood succeeded in getting off with the crown jewels, but during the flight a companion bore away the orb. They were captured and committed to the Tower. By Charles II's command and later pardoned and later pardoned to his favor at court.

At the present time the crown jewels are shown freely to the public in the Tower of London. To the end they are protected only by plate glass and steel bars, but were any attempt made to break the glass, quite automatically the "resources of civilization" would be revealed to the malefactor.

Oldest Wine In World

Roman Glass Bottle Found In Grave Dug In 300 A.D.

A bottle of wine, reputed to be the oldest in the world, is an attraction of the wine section in the Historical Museum of Speyer. This relic is more than 1,600 years old. It is a large Roman glass bottle containing a mixture of wine and honey.

The bottle was found in a grave dug in 300 A.D. The contents were sealed with oil, which in the course of many centuries has become solidified, thus preserving the wine.

M. Bleriot has flown in France frequently since his eventful achievement of 1909, but his passenger-carrying by steamship hitherto in his frequent trips to England.

Breaks French Typing Record

Mlle. Georgette Blin, Rouen typist, has been broken by Mlle. Plan, a typist employed by the League of Nations at Geneva. The speed was 84 words a minute, striking the keys at the rate of 10 times a second for one hour. The old record was 81 words.

A saddle worth $5,000 is owned by Mrs. Georgia Blin, New Orleans. About 14,000 worth of gold and silver is worked into it.

New Rays Discovered

Unlike X-ray It Can Penetrate Layer Of Lead

A description of the newly-discovered Millikan rays will be included in the next Smithsonian annual report on the compilation of which the institution is now engaged. These rays are invisible, but, like X-rays, can penetrate metal. A fifth sheet of lead, however, will stop them. Millikan rays will travel through a layer of lead six feet thick.

They second ray's bulletin of the Smithsonian Institute, "that all space is alive with these new rays, where do not contain matter, but come into us with the velocity of light from the great universe beyond the atmosphere. Probably they are formed by the breaking up of the atoms which compose the stars. No one can yet foresee by what remarkable uses they may come to serve us.

"When Faraday, in 1831, demonstrated before the Royal Society that all that was necessary to carry the magic current was to move a wire across the pole of magnet, a woman in the audience asked him of what use the experiment was. That discovery, as we know, formed the basis of all the modern electrical machinery. Faraday replied:

"'Madam, well you tell me of what use a baby is going to serve us.'

"Faraday's babe has grown up into a giant now. So it may prove with Millikan's.

Discovered High Explosive

Lloyd George Says Few Helped Britain In Great War

Former Premier David Lloyd George, in the course of a speech at Criccieth, Inter-Jewish Federation at Bangor, revealed that Dr. Chaim Weizmann, Russian Jew, helped to save the nation during the war and to the discovery of an essential ingredient of high explosives.

"When I asked what honor I could recommend him for he replied: 'I want no honor, but I would like you to get something done for my people,'" Lloyd George said.

Lloyd George paid a tribute to Jewry, saying that the part the Jewish class responded more readily to the call than the Jewish people in every country. The Jews were always true to the country in which they dwelt and that it was a great mistake to imagine that a race without was international could not be national too.

Had Central Heating Plant

Ancient Castles in Sweden Were Up to Date

The inhabitants of old Swedish castles enjoyed modern comforts more than their counterparts have.

The castle of Hillmingeholm, one of Sweden's most famous country seats, has a central heating system. The central heating plant in the basement with conduits through the walls, discovered by repairmen at the time of the Swedish Academy of Antiquities.

This is believed to be the oldest installation of its kind in northern Europe. Breakfast in bed also apparently was enjoyed by the master of Hillmingeholm, as well as spacious tubes were found leading from their bedrooms to the kitchen.

Made First Aeroplane Flight Across Channel

Frenchman Makes Trip Again This Year

Louis Bleriot, who, in July, 1909, made the first air flight across the English Channel, has crossed the channel again by air, but this time as a passenger in a monoplane piloted by another Frenchman.

Bleriot has flown in France frequently since his eventful achievement of 1909, but his passenger-carrying by steamship hitherto in his frequent trips to England.

Motley Graves' Worm Exterminator

will drive worms from the system in a few days. Easy to take and effective in action, while fully effective is mild.

Autos In Western Canada

Farmers constitute the largest automobile-owning class in Western Canada. In 1918 there were in the prairie provinces, 156,706, or 65 per cent, are in the hands of farmers, according to the survey of provincial Government authorities. Registration of automobiles in Canada at present totals 212,708, or an average of one car to every 11.8 people.

Red Cross Director

Miss Jean MacKenzie, director Saskatchewan Junior Red Cross Society, has taken over her new duties as successor to Miss Ethel Nicholson, former director, who is spending a year in Great Britain taking post-graduate work. Miss MacKenzie has returned recently after a visit in Scotland and France.

Wins Chess Championship

J. S. Morrison, Toronto, captured the Canadian chess championship for the third successive year in the tournament just concluded at Montreal. Of 12 games played, Morrison lost one and drew one. M. Fox, Montreal, was second, and Blake, of Winnipeg, Western Canada's representative, finished sixth.

The Poisons We Love

Every healthy man, woman and child looks forward to the pleasure of appetizing breakfasts, tasty lunches and sumptuously provided dinners without giving a thought to the time when such table delights will, for them, no longer hold attraction. If the reader will recall in many popular gourmets with whom he was acquainted, who no longer continue to meet him at the festive board, he cannot fail to be struck by the fact that almost every one of these friends were fatally stricken when they should have been in the prime of their lives. And if the actual cause of their decease be investigated, the fact that the cancer scourge laid them low should give the reader food for candidly personal self-examination.

The refined foods, rich sauces, meats, denatured vegetables and fruits, white sugar and white flour in the form of bread, lack the traits of health-giving potassium and other salts have been deliberately and thoughtlessly extracted, while in the refining process in the body that any human liver can either neutralize or dispose of economically. The consequences state of acidosis is the precursor of the now practically universal complaint of constipation, and as Dr. Robert Bell, the eminent English authority, publicly declared that "Constipation is the forerunner of Cancer."

The reason why cancer strikes civilized rich and more in an impartial way is because civilized humanity is suffering from an unrecognized potassium starvation. This potash form of starvation is essential to the establishment of cancer in the human body and, as the late Dr. F. W. Forbes Ross stated in 1913, that potassium deficiency be remedied cancer, even if established, will retrograde. Upon the profound experience and knowledge of the late Dr. Ross, Dr. Chas. Forbes Ross has built the unique success of The Cantassium Institute in the body that any human liver can either neutralize or dispose of economically. The consequences state of acidosis is the precursor of the now practically universal complaint of constipation, and as Dr. Robert Bell, the eminent English authority, publicly declared that "Constipation is the forerunner of Cancer."

Believes Leprosy Is Curable

Medical Secretary to Leper Mission Says Disease Is Not Hereditary

Dr. Robert G. Cochrane, who is now 26, has just returned to England after a 40,000 miles tour of the world's principal leper stations.

In his capacity as medical secretary to the Mission for Lepers, he has recently visited every leper colony in Japan, India, Siam, Borneo and the Philippines.

For four months Dr. Cochrane lived among lepers at one of the stations, spending his time attending to them and investigating their cases. He is very optimistic about future work.

"If you can get them early on in their trouble," he said, "many patients can be treated as outpatients. In all these early cases there is a great deal of hope. The disease is not hereditary. Treatment of the disease has been considerable in the past six years. It is curable, and the sooner it is treated early, then with efficient treatment and the segregation of old cases, the scourge will be put under control.

Once victims realize that with early treatment the disease can be arrested, there will be no difficulty in getting them to come forward to the stations. By the end of this century leprosy should, with the help of right measures, be considerably reduced."

A Lonely Queen

Jugoslavs' Queen Is Called Timid and Melancholy

Queen Marie of Jugoslavia, daughter of Queen Marie of Rumania, and considered a striking woman everywhere in the world, is a timid and melancholy woman woman. At the age of 35 she finds herself the ruler of 16,000,000 persons, but separated from them by her ignorance of the language. From the time she was 16 her mother trained her in all modern queenly duties, but she could not teach her the language. She manages as thousands can testify. It is sold by dealers everywhere.

Guaranteed

No Sympathy Needed

Minister: I was sorry for your wife this morning. She had such a dreadful coughing spell that the eyes of the congregation were fixed upon her.

Husband: Oh, don't worry about that! She was wearing her new hat and coat for the first time.

Sores Flee Before It.—There are many who have been afflicted with sores and have driven them away with Dr. Thomas' Eclectric Oil. All similarly troubled should use this liniment. In applying this splendid remedy, as there is nothing like it to be had. It is cheap, but its power is in no way expressed by its low price.

Twenty Lynchings In U. S. This Year

Twenty lynchings have occurred in the United States so far this year, according to the National Association for the Advancement of Colored People. Two of the victims were white.

A train of sixty-five freight cars will be required to transport the wedding for the world's largest hotel, now building in Chicago.

Says U. S. Cannot Claim Largest Plane

Is Greatly Exceeded By British Machine, Officer Declares Manufacturer.

Reports from the United States that the new bombing aeroplane Cyclops, the largest ever built, is hailed as the largest machine of the kind in the world aroused British aeroplane manufacturers to the statement that the claim is incorrect. -It is announced at London that a new British plane, the Handley Page bomber, has just passed its test, far exceeds the United States machine in many details.

The British aeroplane carries no cost of load of bombs, but also a torpedo weighing more than a ton. Its engines have developed 1,400 horsepower against 800 of the United States machine, it is claimed. The machine is built of steel tubing and the whole plane weighs some ten tons.

Was Western Pioneer

Veteran of Riel Rebellion, Born in the West, Dies at Age of 97 Years

Henry Monkman, perhaps the oldest of Alberta's pioneers and well-known by most old-timers of the Edmonton district, quietly passed away at Vegreville a few days ago. The late Mr. Monkman, who lived to attain the ripe old age of 97 years, was born and raised in the west, and, of course, was quite a colorful one. He was a veteran of the Riel Rebellion, and won further distinction by the part he had in bringing the first load of freight into Edmonton by ox-drawn Red River cart.

Like a Grip at the Throat. For a disease as insidious as fatal there is probably none which causes more terrible suffering than asthma. Sleep is impossible, the sufferer becomes exhausted and finally, though the attack passes, is left in unceasing dread of the next one. Dr. J. D. Kellogg's Asthma Remedy is a well-tried remedial agent. It immediately relieves the afflicted, and assuages as thousands can testify. It is sold by dealers everywhere.

Guaranteed

Mrs. Stoutleigh.—"Did you bring that reducing soap I told you to get, Jane?"

Her Husband.—"Yes, and the directions say to apply to your clothing and rub briskly on a washboard."

Thousands of domestic cats, gone wild after living on their own resources in the woods around Victoria and Vancouver, are to be killed by game conservative board.

A charitable feeling causes some people to give to a fellow-man in distress to wish some other man would come along and relieve him.

Rub your scalp with Minard's Liniment

The United States department of agriculture advocates the tidy for home flower gardens because it is resistant to disease and insects.

A man who appeared in a Toronto court charged with stealing a drum didn't get a chance to beat it.

Cuticura TALCUM
The Ideal Powder For Daily Use
This pure, delicately medicated, antiseptic powder does much to overcome excessive perspiration. It soothes and cools, is convenient and economical and is an ideal face, skin, baby and dusting powder.
Sample Each Free by Mail. Address Cuticura Laboratories, Dept. X, Malden, Mass. Sold throughout the world. Soap 25c. Ointment 25 and 50c. Talcum 25c.
Cuticura Shaving Stick 25c.

BURNS

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid (acetyl Salicylic Acid, "A. S. A."). While it is well known that Acetylsalicylic acid is of value in relieving pain, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

Liners Have Crossed Channel Seven Years

More Than 60,000 Passengers Carried By British Aeroplanes

Seven years of regular airways travel between England and the Continent have been completed by the Imperial airways lines. In this period, British aeroplanes have flown 1,200,000 miles and carried more than 60,000 passengers between London and continental points.

Since the London-Paris air service began, the number of passengers carried weekly was less than 20. In some weeks this season about 1,500 passengers have been carried. Passengers of every age, from a baby to a woman of 91 have flown across the channel.

"Conductor," shouted a passenger on the back-country train, "that was my station, sir! Why didn't you stop?"

"We don't stop there any longer," said the conductor. "The engineer is mad at the station agent."

Is Seems There Were

Cop.—Hey, where are you going? Don't you know this is a one way street?

Abe (in new car).—Well, I'm goin' you way, ain't I?

Captain (to Pat applying for job on board a ship).—"Have you ever been to sea before, Pat?"

Pat.—"Do you think I came over from Ireland in a cab?"

Mice and conclusions are not synonymous, yet women jump at both.

It seems awfully hard for some people to be both good and interesting.

Minard's Liniment relieves stiffness

Sixteen Hundred New Settlers Arrive In Time To Assist With Harvest

Winnipeg—Arriving in time to assist in harvesting operations in Western Canada, more than 1,600 new settlers reached Canada over last weekend through Quebec and Halifax.

The majority are destined for points in Western Canada. Six hundred of the new arrivals were on the Letitia arriving at Quebec, Sunday. These include a special party of 42 being brought out under the auspices of the Salvation Army for settlement in Eastern Ontario. The majority of the Letitia passengers, however, are for Western Canada and are for the most part drawn from rural Scotland.

Others are arriving on the Delft, Annonia, United States, Rousillon and Arabic.

Students, office workers and in some instances business and professional men are responding to the emergency call for harvest labor in the western grain fields. Thousands of workers are still required to fill the steadily growing demand pouring into the local employment offices.

A batch of students and clerks who had been temporarily released from their employment were sent off to various points.

The ranks of the westward bound harvest hands have also been augmented by 1,351 men from the United States since the rail rates lowered their rates of an extra inducement to bring workers. Immigration officials scared that an additional number of men were now on their way from the south.

Trouble In Spain

Relief Is Expected That Revolt is Nearly Sidetracked

London.—Unconfirmed dispatches from Spanish correspondents of some of the London morning papers represent the trouble in Spain rather as having been sidetracked than definitely overcome by authorities.

A dispatch to the Daily Express from Barcelona reports that the army in Spain has been split in two, that there have been mutinies throughout the country and that the navy is exhibiting unrest.

Hundreds of apprehensive Spaniards are said to be fleeing into France to invest their capital there.

Working On Bay Line

First Train into Kettle Rapids Expected About Sept. 20

Regina.—The Hudson's Bay Railway, according to information received here by the On-to-the-Bay Association, is being pushed to Le Pas Burt, of Le Pas, states in a letter to the association that bridges are completed at Livingstone and Clearwater and the first train into Kettle Rapids, which is the present end of the steel, 92 miles from the bay, is expected around September 20.

Woman Soviet Minister To Mexico

Moscow—Mme. Alexandra Kollontay, 54, former Soviet minister to Norway, it is now definitely declared, although not officially, has been appointed Soviet minister to Mexico. Russia's only woman diplomat, it is added, will leave for Mexico about September 25, succeeding Stanislaus Pestkosky, the present minister at Mexico City.

"Red" Plot Bared

Sofia, Bulgaria.—It is announced by the police that they have discovered a vast organization of young Communist conspirators hiding their headquarters in Sofia and branches all over the country. A number of arrests have been made throughout Bulgaria in connection with the affair.

Veteran Of Riel Rebellion Dead

Vancouver.—D. Chillis Bole, veteran of the rebellion of the peasants at the Canadian National Exhibition for 20 years, and known from coast to coast, is dead. In the Riel Rebellion he was the youngest bugler in the service.

Mexican Church Laws

Mexico City.—Strict enforcement of church compound of foreigners may be allowed one foreign minister of religion by the new religious regulations which being drafted by the department of interior for presentation to Congress.

Trying To Cap Volcano

Managua, Nicaragua.—German engineers engaged in the unique task of trying to put a cap on a volcano, Masaya, which is near the town of that name. They seek to close the crater so that its poisonous gases will no escape and damage the crops.

Offers $1,000 Reward

Edmonton, Alta.—Rewards for the discovery and conviction of the person or persons responsible for the recent bombing outrages in this city have been increased to $1,000.

Ends State of War

Madrid.—King Alphonso signed a decree ending the state of war which was proclaimed throughout Spain in consequence of the mutinous movement in the artillery corps.

Oppose Wage Increase

Railway Companies Present Their Case In Wage Dispute

Montreal.—Maintaining that the railways are not in a position to pay, or by now in existence as they affect conductors, trainmen and yardmen on the C.N. and C.P.R. are not justify an increase in wages, representatives of both railways presented their cases to Mr. Justice Hugh T. Kelly, of Toronto, and his two colleagues on the board of arbitration and conciliation now attempting to arrive at a settlement in the wage dispute between employees of the two railways and their employers.

The railways point out that the existing rates were established by a board of conciliation in 1921 and that since that time the railways have suffered substantial reductions in passenger and freight rates and the cost of living has also decreased somewhat. The existing wage scale, they point out further, is the outgrowth of conditions developed during and subsequent to the war.

With regard to the present application, the railways claim, are the among the highest paid railway employees in the Canadian service, the joint statement of the companies points out that the application is identical in all respects with those already submitted to and declined by the United States roads.

Would Take Drastic Action If Necessary

British Government Is Ready To Assist Mine Workers

London.—The decision of the mine owners to refer to the various districts the question whether the executive shall be given power to negotiate with the miners for a national agreement is a result of Churchill's visit here. The government having given a guarantee of fair play to the miners, would, if necessary, take drastic action against the owners if they persisted in their die-hard attitude.

The official report of the proceedings of the conference, as drafted by the government, was carefully edited for public consumption, but it is understood that Churchill during the meeting expressed himself with force and emphasis and told the owners that he was responsible for the government to allow more stubbornness on their part to prevent a settlement than others were willing to make real concessions as it seems they are prepared to do.

Canada Not A Candidate

Will Not Ask For Seat On League Council Says Sir George Foster

Geneva.—Geneva correspondent of Excelsior, a daily paper of Paris, states that some of the British dominions have urged Canada to ask for a seat on the league council, but he adds that Sir Austen Chamberlain, British foreign secretary, is not in favor of this. Other powers, the correspondent says, are not in favor of the proposal.

Sir George F. Foster, in reply to a query at Geneva, said that Canada was not a candidate for one of the three newly created non-permanent seats on the council.

Slashed With Razor

Banff, Alta.—Buffalo Child Long Lance, well-known Indian writer and publicist, was slashed with a razor in the hands of a negro servant of Mrs. J. J. Sheridan, of Chicago, and the latter's daughter, Mrs. Gertrude Long Lance, wielding a heavy iron poker. Both are in hospital here. The negress is said to have entered when the negro became abusive while Long Lance was an evening guest at Mrs. Sheridan's home.

School Children on Strike

Winnipeg.—In protest against an order which would compel them to walk a mile to school, thirty pupils of the Caribou Island school have gone on strike. The children have the support of their parents. School board authorities explained that the transfer was necessary owing to overcrowded conditions of other schools in the district. Killoran is a municipality adjoining Winnipeg.

French-Canadians Tour

Quebec.—French-Canadians to the number of about 500, from the provinces of Manitoba, Saskatchewan and Alberta, are expected to reach the ancient capital December 22 next on their tour of Western Canada. The congress is being made under the auspices of the Association d'Education du Manitoba. A tour of a similar character was last year.

Should Keep Accounts

Toronto.—That the failure of business firms to keep proper cost accounts is one of the largest factors leading to bankruptcy and that this could also be said of nations, was the contention of Sir Hugh Poynter, who opened the first convention of the Canadian Society of Cost Accountants here with guests present from the Old Country and the United States.

Report Is Encouraging

Selected Immigrants Making Good Says Overseas Representative

Winnipeg.—Under the effective plan of immigration, the families being brought to Canada from Great Britain are providing themselves willing farmers, and are making good, according to Rev. J. W. Williams, overseas representative of the British settlement service.

In connection with the activities of the service in Great Britain, Mr. Williams stated that lack of interest and lack of money were the two great obstacles which have to be overcome by those seeking to attract immigration of a desirable character to Canada. He considered that the former problem would be met gradually as those who have immigrated made good, but that the second difficulty is one of economics which can only be adjusted by some form of legislation or a general betterment of conditions that is not apparent at the present moment.

Trade Council Will Include All Canada

Convention Next Year Is To Be Held In Victoria, B.C.

Seattle.—Inclusion of all Canada in the Pacific Foreign Trade Council was announced after a conference here between Canadian officials and commercial leaders and representatives of the council. The next convention of the council is to be held in Victoria, B.C., on September 15, 16 and 17, 1927.

Heretofore the coast trade group, which constitutes the western division of the National Foreign Trade Council, has included only six states in the country. Under the new scheme British Columbia and all the other Canadian provinces, it is hoped, will unite their strength with the coast in meeting problems of mutual shipping and commercial interests.

WOULD DEVELOP A DISTINCTIVE CANADIAN SPIRIT

Ottawa.—Canadian club members should do their part to develop a distinctive Canadianism urged A. G. Cowan, of Ottawa, president of the Association of Canadian Clubs, in welcoming the delegates to the opening session here of the 16th annual meeting of the association.

Mr. Cowan in his presidential address, said that ties, tradition and sentiment keep Canada a part of the British Empire, but that was no reason, he pleaded, why Canadians should not develop as individuality. It was not necessary, Mr. Cowan said, that Canadian institutions should be simply imitations of either British or American. Some of the ways Canadians have already shown capacity to develop their own institutions and change to suit their needs of club members will be continued, said Mr. Cowan, as the policy is considered effective in discouraging racial and sectional prejudices.

"Too much is being heard, Mr. Cowan went on, quoting the remark of a prominent citizen of east or west, of Ontario and Quebec, and not enough is being heard of Canada.

He announced that preparations are being made for an adequate celebration next year of the sixtieth anniversary of Confederation throughout the Dominion. There will be a celebration in the capital, said Mr. Cowan, and also throughout the provinces, and the Canadian Clubs will be urged to take definite steps in that connection.

She Dances to the Waterfall

The wonderful setting of the little waterfall known as the Gibbis Steps, Paradise Valley, near Lake Louise, apparently inspired this nature-dancer with the spirit of life, and with the song of the water and the soft whistling of the bird-life abounding in the woods around. She was photographed while dancing to the music of her soul.

BRITISH MARINES ARE KILLED BY CHINESE TROOPS

Shanghai.—Three British naval officers and four seamen were killed and two officers and thirteen seamen wounded by Chinese troops of Wu Pei Fu's northern armies at Wanhsien, Czechwan province, 1,250 miles up the Yangtze River. The British gunboat Cockchafer manned the fleet during considerable damage to Wanhsien, a city of 150,000. How many Chinese were killed or wounded is not known.

The conflict was begun when a British naval party of forty men on a river boat attempted to release two British steamers, the Wahsien and Wantung, seized by the Chinese in reprisal for the alleged drowning of fifty-six Chinese soldiers August 29, when the British steamer Wantig, in attempting to escape from a Chinese capture, upset three native boats.

The British killed were: Commander C. Fardy and Lieut. R. Kigzie, of the gunboat Dispatch; Lieut. C. F. Ridge of the gunboat Cockchafer; Engineer Lieutenant Harman, Marrott and Farrow.

The Chinese troops were commanded by General Yang Sun, an adherent of Wu Pei Fu, war lord of the central provinces, who was at Hankow, hundreds of miles distant, directing fighting against Cantonese forces. Yang's men had seized the British steamers and refused requisitions and demands for the release of the officers of the gunboat Cockchafer.

The British retired but the negotiations continued. The small river steamer Kiawo, with forty men of various British gunboats aboard, succeeded in rescuing the officers of the steamer Wanhsien before the Chinese hitting the banks of the river began firing.

The British party, under fire, attempted to approach the steamer Wantung, but twenty-two of the forty men of the British navy were killed or wounded. They stood by steamer until their ammunition was five boat while the Wantung's officers leaped overboard and rescued all of them from the water except Chief Engineer Johnson, who was wounded or drowned.

The British gunboat Cockchafer then bombarded the city of Wanhsien, its shells doing much damage, with an undetermined number of Chinese casualties.

New Zealand Is Loyal

Dominion Must Be Kept British Says Prime Minister

Auckland, New Zealand.—"We must keep New Zealand British," declared Hon. J. G. Coates, Premier of New Zealand, during an address to his constituents at Kaipara Harbour.

"If others adopt New Zealand as their country," he continued, "they should be loyal to our consitu tion and our flag."

No doubt existed in the minds of New Zealanders, he said, as to where their loyalties lay. They were not about their loyalty to Great Britain. Their object must be to bind the empire together.

Encourage British Emigration

London.—In a letter to the Morning Post, Lady Aberdeen suggests a plan to encourage British emigration to Canada, whereby chief brothers and sisters of all classes should go out together, claim their land grant, take up service with neighboring farmers and learn farming and the customs of the country while watching over the erection of their house and the preparation of their farm.

Canadians Serve On League Committees

Representatives Have Been Appointed On Six At Geneva

Geneva.—Canada secured representation on all six committees of the League of Nations assembly.

Sir George E. Foster serves on the first committee, which deals with legal and constitutional questions.

Sir George is also a member of the sixth committee, along with Dr. W. A. Riddell, Canadian minister resident of Canada at Geneva. The sixth committee deals with political questions.

Hon. Philippe Roy, Canadian commissioner-general in Paris, takes his seat on the second committee, which is dealing technical and organization questions.

The third committee considers the question of the reduction of armaments, and Hon. Mr. Roy and Sir Herbert Ames, financial adviser of the League of Nations, represent the Dominion thereon.

Sir Herbert Ames was elected also as a member of the fourth committee to deal with finance.

Dr. Riddell is on the fifth committee, which handles social and general questions.

First Message Between Irish Governments

Ulster Expresses Sympathy With Free State Over Cinema Tragedy

Belfast, Ireland.—For the first time in history a message of sympathy has passed between the two Irish Governments.

Finance Minister Hugh Pollock, acting in the absence of Premier Craig, telegraphed President Cosgrave, of the Free State, expressing the deepest sympathy with those bereaved in the cinema tragedy at Drumcondhra.

Wrecked German Express

Two Unemployed Men Caused Death Of Twenty-two Passengers

Berlin.—Two unemployed men, Willy Schwarz and Willy Weber, arrested on suspicion of having caused the disaster to the Berlin-Cologne express at Ahrensfelde, August 15, in which 22 passengers were killed, are said to have confessed.

They declared that the men said they tore up the track with the intention of derailing the train, but when the disaster occurred they were horrified by the screams of the injured that they fled, abandoning the chance to plunder the coaches.

GERMANY NOW IS A MEMBER OF THE LEAGUE

Geneva.—Germany, with impressive unanimity was elected a member of the League of Nations. She was thus admitted to enter the portals of Geneva's institution of peace.

The solemnity with one also Germany was designated "for all time" as president Nischitch put it, a member of the league council, and will thus sit as the equal of Britain, Great Britain, Italy and Japan.

Germany has accepted the action of the league for the election of Baron Konstantin von Neurath, German ambassador to Great Britain, as the German foreign minister, announcing the departure of a German delegation for Geneva, and by this acceptance formally herself to the mission to aft the obligations and responsibilities under the covenant of the league, which was fashioned to outlaw war.

The assembly also ratified the recommendation for an increase in the number of the non-permanent members of the council from six to nine.

Another incident compelling international attention was India proclaiming with no faltering voice her ambition to become a self-governing country, like Canada or Australia. Speaking first to perfect English, then translating his own address into faultless French, the Maharajah of Kapoorthala, attired in the latest occidental garb, spoke feelingly of life awakening, voicing the hope that she would soon become "a united and self-governing country like Canada or Australia."

Continue Customs Probe

Inquiries In Maritimes Finished and May Be Resumed In Vancouver

Montreal.—The royal commission investigating the administration of the customs department has now finished its inquiries in the Maritime provinces and will probably proceed to Vancouver, it was stated by R. L. Calder, K.C., counsel for the royal commission.

After Vancouver the commission would probably proceed to Windsor, Ont., and Toronto.

On Coast To Coast Flight

Boston, Mass.—Two college girls left from the Boston airport as passengers in an aeroplane on a scheduled coast-to-coast flight. In six-seven hours, they will be the first of their sex to fly from coast to coast. The girls, Margaret C. Needham, of Manchester, N.H., and Helen A. Park, of Brooklyn, N.Y., were winners in an essay contest.

Algoma Oat Crop Fails

Sault Ste. Marie, Ont.—According to reports reaching here, the oat crop in practically every farming district in Algoma has been a complete failure this year.

Resentment Displayed By British Labor Over Criticism By Soviets

Studying Industrial Conditions In Canada

Sir William Mackenzie Heads Mission Sent by British Government

London.—Sir William Mackenzie has left London for Canada as head of an industrial mission sent by the British Government to study industrial conditions in Canada and the United States. He will first go to Ottawa to consult with the Canadian department of labor and then will visit the principal industrial towns throughout the Dominion, right to the Pacific Coast.

After his Canadian tour, he will visit the United States and return to England via Canada. He is being sent by the British ministry of labor to investigate particularly the character of the relations between employers and employees in various industries in Canada and the United States. He is commander and a knight of the British Empire, Sir William is said to be the greatest expert on industrial relations in Great Britain. He has also on a score of arbitration and industrial commissions.

Raise Telephone Rates

Alberta Government System To Increase Rates Dec. 1st

Calgary.—The telephone department of the Alberta Government has made an all-round increase in telephone rates for the entire province.

In the city of Calgary, rates will rise from $36 to $42 a year for residence phones and from $40 to $72 a year for business phones. In rural districts the advance generally is $6 per annum, the rate varying according to the locality and the cost of urban system. In the Calgary district, rural subscribers' rates were $30 a year the new rate will be $36. In the case of Leduc, for instance, the rate was $24 a year, formerly, the increase brings the price up to $36. The new rates will be effective October 1.

India Wants Self-Government

Is Country's Ambition Says Maharajah At League Meeting

Geneva.—An incident compelling international attention in the League of Nations assembly was India proclaiming with no faltering voice her ambition to become a self-governing country, like Canada or Australia. Speaking first in perfect English, then translating his own address into faultless French, the Maharajah of Kapoorthala, attired in the latest occidental garb, spoke feelingly of life awakening, voicing the hope that she would soon become "a united and self-governing country like Canada or Australia."

Continue Customs Probe

Inquiries In Maritimes Finished and May Be Resumed In Vancouver

Montreal.—The royal commission investigating the administration of the customs department has now finished its inquiries in the Maritime provinces and will probably proceed to Vancouver, it was stated by R. L. Calder, K.C., counsel for the royal commission.

After Vancouver the commission would probably proceed to Windsor, Ont., and Toronto.

On Coast To Coast Flight

Boston, Mass.—Two college girls left from the Boston airport as passengers in an aeroplane on a scheduled coast-to-coast flight. In six-seven hours, they will be the first of their sex to fly from coast to coast. The girls, Margaret C. Needham, of Manchester, N.H., and Helen A. Park, of Brooklyn, N.Y., were winners in an essay contest.

Algoma Oat Crop Fails

Sault Ste. Marie, Ont.—According to reports reaching here, the oat crop in practically every farming district in Algoma has been a complete failure this year.

Problem Of Britain's War Debts To U. S. Is Definitely Settled

Quebec.—That insofar as sound public opinion in England was concerned, the problem of Great Britain's war debt to the United States was settled and there was no question of the British Government re-opening the matter was the statement made by His Excellency, Sir Esme Howard, K.C., M.G., C.V.O., British ambassador to the United States, who is in Quebec for a brief visit.

"The only thing I can say," declared Sir Esme, when asked regarding the current debt cancellation rumors, "is to repeat the recent statement of Sir Austen Chamberlain, British secretary of state for foreign affairs. That is, that the question has been settled and it is not for me to open it. Everyone in England intends to pay the debt as long as there is a physical possibility of so doing. There seems to be no reason why it should not be paid in its entirety."

Sir Esme declared that he had no late information regarding the appointment of a Canadian ambassador to the United States. He expressed, as he has often stated in the past, that he had no objection whatever to the appointment of such a minister.

Bourgeoisie, Eng.—Two sensational incidents occurred at the opening of the Trades Union Congress, which is sitting here this week. Strong resentment was displayed by the British trade union body at the attempt of M. Tsinsky, a Moscow labor delegate whom the British Government refused to permit in England, to impose the Soviet "standard of criticism on the conduct of the late general strike. The second was the hostile reception by the miners' delegates of the railway representatives. J. Bromley, although he put forward no plead the cause.

The Tomsky incident arose out of the circulation among the delegates of an abusive telegram, signed ostensibly in behalf of the all-Russian central council of trade unions by Tomsky, attacking the British Government, which it accused of admitting representatives from England, that it would not reply to "this ill-instructed and promiscuous gathering."

J. H. Thomas and other English trade leaders were also attacked in the Soviet telegram. The general council declared emphatically that it would not countenance any intolerable interference in British trade union affairs," nor would it permit the position of a fraternal delegate to be "degraded into a tirade against representatives of the British movement."

New Motor Fuel

Experiments Show 75% Grain Dust Runs Auto Engine

Washington.—Power obtained from a grain elevator has been found to have sufficient explosive power to run an automobile engine.

Department of agriculture chemists, who conducted tests, announced that while the engine ran only a short time prolonged continuous run, enough power was developed with the dust to run it over many hours.

A hand system of feeding the dust through a tube to the intake valve was employed.

The experimenters said the study gave "encouraging results which indicate that the possibility of using grain as an engine to use grain dust as the source of fuel."

A Handsome Bequest

Late Baroness Strathcona Left Montreal Hospital $121,500

Edinburgh, Scotland.—The will of the late Baroness Strathcona, who died on August 18 last, which was filed at Edinburgh Sheriff court, on November 17, 1925, and includes, among other public bequests, one of $121,500 (about $121,500) to the Royal Victoria Hospital, Montreal.

Baroness Strathcona was a daughter of Lord Strathcona, a former high commissioner for Canada in London, and succeeded to the title upon the death of her father in 1914. She was married in 1888 to Dr. Robert Jared Bliss Howard, of Montreal, who predeceased her in 1921.

Plans Visit To Palestine

Prince of Wales Will Dedicate War Cemetery Next Year

Jerusalem.—The Prince of Wales will visit Palestine during April of next year, to dedicate the war cemetery on Mount Scopus, it is learned here.

General Sir George MacDonogh, Sir Frederic Kenyon and Lord Arthur Brown have inspected the war grave on behalf of the British war graves commission.

Mine Sweeper Missing

San Diego, Calif.—The British Government has failed to the commander of the eleventh naval district here to aid in a search for the New Zealand mine sweeper Wairkari. The ship was due here 11 days ago.

Submarine's Long Journey

Dutch Vessel Travels Ten Thousand Miles Without Escort

When the Dutch submarine K XIII., arrived at San Francisco, it established a new record for a submarine without the protection of a convoy. The long slender craft in its trip from Helder, Holland, travelled about 10,000 miles.

The long voyage, part of which was under rather trying conditions, although Lieut. Commander J. G. J. Van der Kun, the burly commander, was in command of submarines for the Netherlands for ten years, was practicable throughout the entire trip.

"But for that matter I am always pessimistic on a submarine, for that is safest," he explained. "I do not let even the men become optimistic. The regular rations of Holland gin which the navy gives to every sailor is prohibited by me on the submarine. On the surface ship it is all right. You see on a surface boat the men may drink gin and be not optimistic if they like, but under the water they must be serious and take no chances."

The K-13 did not spend a great part of her voyage under the waves, but plowed slowly along on the surface at eight knots an hour. The craft can travel when submerged, but the commander barred speed in the long distance run.

The K XIII. embodies the latest ideas in underwater ship construction. It was commissioned last March. The boat is propelled by two 6-cylinder, 600-horsepower engines which develop a total of 2,400 horsepower. Its fuel is gas oil, which is an economical fuel.

Commander Van der Kun said the trip was without an outstanding experiences. The remarkable thing about it was the unbroken monotony.

The chief feature of this new system is attributed to the fact that by having a hermetically sealed compartment, which can be opened separately, a low temperature is maintained until the box is opened at destination. The K XIII. has been found that a fish carton can ride 48 hours without damage to the contents."

The Dutch Portuguese, commends the Natural Resources Intelligence Service, in possessing vast quantities, of suitable insulating seaweed (gelidium corneum), of submarine growth. Each tide brings in its quota of leaves torn by the tide from vast submerged beds of the same botanical kind. This is gathered by ox teams and hauled out on the gravel beaches to dry, much as hay is cured.

Belgrass makes an excellent lining for houses, through its ability to prevent the passage of heat and cold. It is excellent as a sound deadener and, in fact, for all purposes that an insulating material is required.

Problem Of Handling Fish

New System Evolved Which Is Said To Be Satisfactory

The transportation of fish has always been an important problem in Canada where the distances between centres of population are considerable and the summers are warm, says the Natural Resources Intelligence Service of the Department of the Interior at Ottawa. Refrigeration has been the chief method of packing for local use, but this is a costly process and requires that considerable quantities be handled at one time to make shipping economical to the extreme perishability of the product and the need for, re-icing and prompt sale. Mr. Made this traffic a more or less successful business but must be constantly kept separate from dry freight.

The whole problem of handling fish in limited quantities between the producer and consumer is now practically solved by the use of the insulating cartons, according to information now available. A concern on Long Island, New York, has developed a simple package that will keep the fish dry and in good condition for many days. The method may be sent either by express or by parcel post, depending on the size. A writer in "Popular Science Monthly" gives the following to say of these packages:

"The carton runs in four sizes to carry 15, 25, 30 and 50 lbs. and when filled make unit packages weighing 18, 28, 39 and 60 lbs.

"One unique feature of the shipping kit is that it is propelled by its own four-cycle, six cylinder engine, which develop a total of 2,400 horsepower. Motor gas oil, which is an economical fuel.

Commander Van der Kun said the trip was without an outstanding experiences. The remarkable thing about it was the unbroken monotony.

The chief feature of this new system is attributed to the fact that by having a hermetically sealed compartment, which can be opened separately, a low temperature is maintained until the box is opened at destination. The K XIII. has been found that a fish carton can ride 48 hours without damage to the contents."

Belgrass makes an excellent lining for houses, through its ability to prevent the passage of heat and cold. It is excellent as a sound deadener and, in fact, for all purposes that an insulating material is required.

Woman Has Queer Occupation

Catalogues Skulls in Museum of Royal College of Surgeons

In a fifth floor room in Lincoln's Inn Fields, London, whom all outside was bright and sunlit, a woman sat at a table faced by a row of grinning skulls.

To her right hand and her left were skulls and yet more skulls, while in other parts of the room were human bones on which rays of light danced with gruesome frolicsomeness.

In the gardens below young people played at tennis, and happy laughter in the street floated into this morbid luxury number.

The woman? She was perhaps the coolest woman in London. Not a glance had she for these poor grinning heads and stacks of bones that once were living people. Instead, she was intent upon writing, and went on and on, making notes as though unconscious of her grisly audience.

Had Scotland Yard's "Big Five" dashed into the room at that moment they would have found—and the most horrifying mystery of the year and a confession on which the ink was still wet, but a solemn cataloging of the thousands of skulls which are the property of the Royal College of Surgeons.

Miss Miriam Tildesley is quite at home in her room, and in spite of long association with skulls and crossbones, has not forgotten how to smile.

Her work is the subject of a fascinating reference in the annual report of the museum committee, published for the past year. Miss Tildesley has been engaged in verifying the historical of the native Indian and Chinese skeletons in the museum of the college, and more particularly in establishing the genuineness of the Vedda specimens—a point of importance, since that race is coming to exist in its original purity.

Tigers Fear Wild Dogs

India's King of the Jungle Dread Their Coming

In the unpleasant looking wild dogs of India may be found an excellent illustration of the old saying, "Birds of a feather stand, divided we fall". Evil-looking, evil-looking, shaking things, and all the horrible, hunted dogs are respects them and keeps out of their way.

These wild dogs hunt in packs of varying sizes. In the Central Provinces they are well known and hated alike by villagers and by denizens of the jungle. Hunting by night, and occasionally also by day, they sweep through the forests, tearing down indiscriminately and devouring whatever game they can find. Deer fly in terror before them, and not even the doughty sambhur dare tarry to offer combat.

The great killers of the jungle, such as the tiger and the leopard, also dread the coming of the wild packs, for the latter clear the jungle of life for miles around by either devouring or scaring away the game.

An Ancient Superstition

Unless Notified of Death in House Bees Would Swarm Elsewhere

In leaving instructions for a message to be sent to the grizzled old life memorial card, Alfred George Gambrill, the Richmond bee expert, conformed to a very old superstition. It used to be deemed necessary, when a death occurred in a household, to go at once to the hives, tap three times on the hives and tell them of the event, otherwise they might take offence and desert the stricken home. Also, in the case of a death, the hives were draped with black on such occasions, and portions of the funeral feast were placed on the hives, as well. Only a few years ago a writer in a London journal told how, at Hyde Park Corner, he saw a man going round and round a coachman with a long funeral streamer because "when my dear brother died I forgot to go and knock on the hives and tell them that he was dead."—London Correspondence.

Does Not Keep Dates

Century Plant Blooms Oftener Than Every Hundred Years

One of the century plants at the Royal Botanical Gardens unfurled its huge greenish-white, bell-like blossoms the other day and belied its name by not being a century-plant. Seven years, according to Henry Becker, foreman gardener, since the plant last flowered, "keeps no dates." Although most people believe that the century plant blooms but once in a hundred years, this is not true. It is probably only forty-five years since this one flowered, and it will not be a hundred years until it blossoms again."

Popular Belief Disproved

Thin Glass Stands Heat Better Than Thick One

Most people believe that a thick turnbler stands the heat of boiling water better than a thin one. Science, however, discountenances this belief, since it has been proved by experiment that a very good conductor of heat, and when hot water is poured into a thick glass tumbler, the inner surfaces of the glass soon get a much higher temperature than the outer layers. This high temperature causes a local expansion, and the outer layers are then burst by the expansion of the finer ones.

Changed His Mind

Attorney—Mr. Jackson, do you promise to tell the truth, the whole truth and nothing but the truth?

Witness—"Huh! If you is gwine to act thataway I ain't got nothin' to say whatsomever."

Spoke Frequently

Doctor—"Did your wife say anything before she died?

The Widower—Yes, she talked incessantly for fifty years.

Gossips might appropriately be termed misfortune tellers.

An Inland Seaport

Ships Travel Thirty Miles Through Canal to Manchester

All the ingenuity of building engineers is represented in the Manchester ship canal, which makes idle city an ocean port thirty miles inland.

The canal crosses a river and a canal, and five railroad bridges were relied on long grades so that large vessels might steam into Manchester.

The Bridgewater Canal, handling horse-towed barges, crosses the Manchester strip without their waters meeting. This is accomplished by actually carrying the smaller canal across the other on a high swing bridge.

Gates at either end of the water bridge shut the water in the channel, and the mechanical engineer and bridge builder and the civil engineer and bridge builder and the civil engineer and bridge builder and the civil

Canadian Grown Seeds Enjoy A High Reputation Under The Canadian Standardization System

"Northern-grown" seeds are much discussed by farmers and gardeners who do not live in the north. The term has come to imply unimpaired vigor, early maturity and productiveness. Canadian-grown seeds enjoy a high reputation because of these qualities and because there has been established in Canada a system for standardizing seeds under grade names designated in the Seeds Act. The inspection of the seeds entering into the department of agriculture inspect seed crops for purity of variety at a cost of fifteen cents per acre in the growing. The threshed and cleaned seed is again inspected by the same officers, and if of superior quality is graded, registered, and sealed to be sent for commerce.

It was at the same farm that L. P. Newman, Canadian Government cerealist, first originated Garnet wheat, a variety of spring wheat that matures from seven to ten days earlier than Marquis, stands dry weather and excessive moisture better, is more hardy than the darker of rust than any other wheat and because of its earlier ripening advantages will extend the wheat growing area of Canada 150 miles farther northward and westward for wheat growing an area of over 40,000,000 acres.

Important work in plant breeding, in Dominion Experimental Farms is being carried on. In recent years 300 varieties of apples have been originated and 200 crosses and hybrids of a quality unequalled by any other place in the world. The world's greatest collection of alfalfas and clovers, originated from imported seed crops, and it is anticipated that this amount may be increased to 1,000,000 pounds annually. Seed of No. 1 grade will yield approximately a dollar per pound. Seed of this grade and any inferior qualities equal or superior to the imported stocks of the same species will be sold in competition with them at prices commensurate with the quality.

From the same grass seed crop five hundred thousand pounds were inspected and sealed in the sack for export as a cash seed testing and sealing at one-fifth of a cent per pound. Trading on the basis of an inspection certificate, as distinguished from a sample certificate, would seem to be highly satisfactory to seed merchants.

This is the greater part of Canadian requirements of field roots and garden vegetable seeds have been imported. For many years ago a start was made by the seed branch to encourage the home production of these seeds. The work was undertaken with attended with success but was disrupted during the war. About thirty-five farmers and gardeners who have made a specialty of growing seed of one or more kinds of these crops have maintained themselves, and during the last few years these have steadily increased in number. The province of British Columbia offers numerous local climates, and intensive soil and moisture conditions the best quality of field root and garden seeds in the world may be economically produced in quantity for commerce.

The development of this industry will necessarily continue to be slow because it requires many years of special training on the part of the seed grower. Horticultural plant breeders at the various experimental stations in Canada have undertaken to provide the seed crops upon the best and selected to fit into Canadian climatic conditions. It is in the multiplication of this stock seed that the growers in British Columbia and other parts of Canada will devote their attention. The steady development of this special form of the seed industry assured because the quality of the seed produced excels that of any other seed, and is surprisingly suitable for Canadian use.

Oil Strike at Unity

It is reported that oil at 2½ gravity estimated at 20 to 50 barrels a day, has been struck by the Unity Well Oil Company, 15 miles northwest of Unity, Sask. The well was not spudded in June 18, and is working on a 12-inch hole. Drilling operations were resumed in an effort to reach the secondary sands. The report states it is the first oil well to be located in Saskatchewan.

A sea-going wheat has been developed at Winnipeg. Now for a barley-less pickle.

Discoveries By Plant Wizards

Important Results Obtained By Experiments in Plant Breeding

Since Dr. Charles Saunders origin ated Marquis wheat, which for 15 years has been the standard sort selected at the International Show at Chicago and is the most popular spring wheat among American-Canadian farmers, several other important discoveries in agriculture and horticulture have been made by the plant wizards now practised scientists at the 27 Canadian Government experimental farms. The discovery of Marquis wheat, which is regarded as one of the most notable in agriculture, was made at the Central Farm in Ottawa.

It was at the same farm that L. P. Newman, Canadian Government cerealist, first originated Garnet wheat, a variety of spring wheat that matures from seven to ten days earlier than Marquis, stands dry weather and excessive moisture better, is more hardy than the darker of rust than any other wheat and because of its earlier ripening advantages will extend the wheat growing area of Canada 150 miles farther northward and westward for wheat growing an area of over 40,000,000 acres.

A sea-going wheat has been developed at Winnipeg. Now for a barley-less pickle.

Money and Men

Substantial and Well Grounded Prosperity Seen For Canada

Writing on Canada in a recent issue of the Monthly Review of the London Joint City and Midland Bank, Sir Henry Reginald McKenna, chairman of the bank and a former chancellor of the exchequer in the British Government, stated: "Four absolutely essential conditions to expansion, the extent to which is limited only by the degree of enterprise of the people, as well as growth of industry, are based largely on water-power, and no nonsharp growths there are remarkable by the lack of a fuel are to be seen in the Dominion. The conditions appear to be sound, and the country's progress has been achieved on the whole by conservative methods. Given money and the right type of men there are all the elements of continued progress and enduring growth in the wealth and well-being of Canada, provided the prospects are not marred by the extreme inroads on exaggerated expectations.

Garnet Wheat

Yields Forty Bushels Per Acre On Summerfallow as Brandon

Over 2,000 acres of farmers are testing Garnet wheat this year and there should be available for next year's seeding nearly 100,000 bushels. At Brandon the Garnet has threshed 40 bushels per acre on summerfallow and more than 70 bushels on stubble land.

Under dry season conditions, Garnet wheat has been known to yield twice the difficulty as compared with Marquis wheat, and even under ideal conditions has always compared very favorably with Marquis. During wet growing and ripening seasons the earlier maturity of Garnet materially assists in evading rust and frost. This earlier maturity naturally would tend to still further push the wheat growing areas of the prairie provinces farther north and increase the growing more secure in many of the older districts which have been subjected to late summer frosts.

Buy Canadian Coal

More Extensive Use Of Canadian Coal Deposits Should Be Urged

It may be expected that those engaged in the Canadian coal industry will be anxious to maintain their hold on the Canadian market, but, why should the rest of the people of the country be concerned over the lessening of shipments to this side of the line? The Canadian supplies in sight are strictly limited, and it is to their interest to have them conserved for local use. The growing feeling in Canada in favor of more extensive utilization of Canadian coal deserves and is likely to undergo no diminishment, despite any steps that are taken across the border to curb it. The present government encouragement to the building up of an interprovincial coal trade, Canadian governments, state and local, look to the American sources of supply.—Edmonton Journal.

Lethbridge Irrigation Tract

Crop This Year is Expected To Be Record Breaker

The Lethbridge Northern Irrigation tract, opened for settlement a couple of years back, according to the Provincial Government report, promising prospects to the farmers operating there. In 1925 the total production of the tract was valued at less than $400,000. This year it is expected to exceed $2,000,000. Now towns are growing up following the extension of the railway and fine homes are being built.

Infantile Paralysis in Germany

Reports of infantile paralysis are becoming more numerous in Germany. In the Catholic orphan asylum at Hannover, 16 cases out of 24 children have been stricken and that five have died. Other cases are reported in Hannover and two at Spandau, near Berlin.

Expect As Big Crop As Last Year

Returns Would Indicate Above Average Crop For Western Canada

In the latest crop report, issued by the Manitoba Free Press, based on information received from over 300 correspondents throughout the provinces of Manitoba, Saskatchewan and Alberta it states that "taking into consideration the increased acreage in the western provinces, the outlook would appear to be for a yield as big as last year."

The questions asked the correspondents included one as to the estimated yield, and commenting on the answers to this question, the report says: "We believe these will get under the skins of a poor crop in Canada this year," and "yield wheat crop in Canada to be called 371,275,700 bushels from 37,-927,722 acres of which 232,829,000 bushels were grown in the three provinces of Manitoba, Saskatchewan and Alberta. The average yields of wheat are the Dominion in 1925 was 16.2 bushels per acre.

The total production of oats in Canada last year was 475,384,000 bushels from 9,987,000 acres, an average yield of 35 bushels to the acre. Barley yielded 112,668,300 bushels from 4,076,000 acres, an average of 27.6 bushels per acre.

Last year's wheat yield was the second largest on record in Canada, the previous highest total being 474,-199,000 bushels in 1923. Other high years were 398,154,000 bushels in 1922, 300,858,100 bushels in 1921 and 382, 442,000 bushels in 1915.

Wonders Of Plant Life

Believes Plants Have Their Own Hours of Sleep

Plants not only have their vices, vanities and regular hours of sleep, but their moments of wit, sense as well, according to Sir Jagadis Bose, one of Britain's greatest scientists and authorities on plant life.

The sixth sense possessed by certain species is a mysterious force which permits them to detect minute changes in the intensity of light, changes that go unnoticed by the human eye.

The ominous plant spends its life in a leisurely way. It wakes gradually between 5 and 7 o'clock and soon, by sipping alkali, gets itself in a feeling fully asleep only in the early hours of the morning.

Sir Jagadis has perfected a marvellous piece of apparatus which gives plants under observation a graphic record of their doings of the day and night and records the answers.

Whitefish From Prairies

Market For Alberta Whitefish Established In Chicago

Chicago fish dealers are finding Alberta whitefish to their liking and are buying great quantities of this class of fish and are tending to boost the market. For years Alberta has been endeavoring to sell the Eastern States on the wonderful eating qualities of this fish in an endeavor to establish a market for fish that the market is not only established, but there is also a keener demand for whitefish from the larger cities in the prairie provinces

Okanagan Apple Crop

A revised estimate of this year's apple crop in the Okanagan Valley, under the provincial horticultural department, places the expected yield at 2,217,000 boxes. This is an increase of approximately 200,000 boxes over the estimate of June 28 and compares with the 1925 total of 2,552,449 boxes.

B.C. Lumber For South Africa

Lumber from Vancouver for South Africa has been moving in greater quantities this year than for many years. Five ships each carrying about 4,500,000 feet, have been loaded at Vancouver and departed. Within the next six weeks two more ships will load lumber for South Africa.

Reward Wheat

New Variety of Wheat Being Tested Out At Ottawa

A new hard spring wheat which gives promise of being even better than either Marquis or Garnet, is being tested at the Canadian Government experimental farm at Ottawa.

The name of this new variety is Reward." It was started in "Reward" which, according to tests made in recent years and five days earlier than Marquis. It is also believed "Reward" will have equally as good milling qualities and will give even heavier yields because of the heavier weight. Measured bushels of "Reward" which have been grown in Ontario weigh as high as 66 pounds.

Cerealists believe that if successful tests measure up as well as those of recent years have done, the "Reward" variety will supersede Marquis, the wheat that in 15 years has won the world's wheat prize at the International Grain and Hay Show at Chicago, and Garnet, a new early wheat, which also ripens ten days earlier than Marquis, but which does not mill as white.

Fifty Bushels to the Acre

Good Yields Are Reported This Year In Southern Alberta

Wheat on farms in Southern Alberta is turning more than fifty bushels to the acre on spring plowing and in the late sown crops. A number of farmers in the Granum district are getting yields close to 50 bushels to the acre. The earlier ripened grain is not so heavy, but is yielding above 25 bushels and is of good quality. It is stated that the average for the entire province will be more than 20 bushels to the acre, which on a wheat area of 6,500,000 acres, should bring the total yield to at least 120,-000,000 bushels.

British Settlers Leave For Bolivia

Former Service Officers Will Form Settlement on Paraguay River

A party of British former officers of fleers have sailed on a 666-ton river steamer for Bolivia, where they propose to form a new settlement and grow cotton and market timber. The Bolivian Government, to encourage the movement, has granted them 2,000 miles on the Paraguay River, which will afford water transport to Buenos Aires, giving Bolivia, for the first time, convenient access to the Atlantic Ocean, 1,500 miles away.

All members of the British expedition have had to be experienced in tropical work.

Dairying In Saskatchewan

Now Regarded As a Permanent Branch of Agriculture in the Province

Dairying in Saskatchewan has now become a permanent branch of agriculture in all districts of the province, according to the report of the present year, according to the provincial dairy commissioner. It now ranks with the best breeding in the Saskatchewan. This is the largest number of plants ever started in any single year, and production in Canada as a province, and probably a larger number than was established in any two years previous.

An Underground Wonder

At the new tube station now under construction beneath Piccadilly Circus, London, an area of 15,000 square feet will be devoted to the booking hall alone. This will necessitate the removal of about 10,000 tons of London clay. When completed the station will be able to handle 50,000,000 passengers annually.

B.C. Lumber Mills Busy

During the first six months of this year the mills of British Columbia exported 589,053,346 feet of logs and lumber. This is an increase of 45 per cent. over the quantity exported during the corresponding period of last year.

American Tourists Will Spend $190,000,000 In Visiting Canadian Points This Year

Railway Carries Mail Only

New Tube Will Shortly Be Opened To London

One of the most wonderful tube railways in the world will shortly be opened in London, England.

There will be no booking offices, no barriers, and no notices directing you not to sit upon the moving staircases—for there will not be a moving staircase to sit on!

More remarkable still, though the tube will resemble a shrimp's nest through the heart of underground London, there will be neither engine driver nor signalman. The entire railway will be devoted entirely to the conveyance of letters and parcels between railway stations and postal sorting offices.

The railway runs between the East End District Post Office and the Paddington District Post Office, and was actually tunnelled some time before the war. Work was suspended upon it until quite recently, when it was decided to bring it into operation as soon as possible. It is, in fact, a development of an old pneumatic tube line constructed many years ago, but left derelict after a rather adventurous working period.

The tunnels of the new line are quite narrow, for the little trains that run through them consist of trucks about five feet in height and thirteen feet in length. Besides the original stations mentioned there are six others, whilst the remaining two are at Liverpool Street and Paddington stations.

Some people may wonder whether this is worth while to have a tube of this kind, but it is found to obtain many millions of letters and parcels that pass through London in a year to and fro. It is proved that they are conveyed from station to station and from post office to post office by motor or horse vehicle through the London traffic, the fact that they must be hand-loaded and hand-unloaded, it must be remembered, adding to the delay and to the congestion of the traffic in London's streets. The opening of the new tube railway, therefore, is expending up in the post office arrangements.

Icehouse Not Modern Idea

Just When They Came Into Use Is Uncertain

Ice, so indispensable in hot weather was once an almost unknown luxury. In summer heat butter and milk were often improved by nearness to cold springs. Meat was put into barrels of brine or dcaned in spices to offset the odor of slight decay. But cold storage plants and household refrigerators have now placed refrigeration on a world-wide basis.

Ice was used to some extent in ancient times by potentates who had slaves to carry it from neighboring mountains. It seems to have been stored in caves. But just when icehouses came into use is uncertain. They were doubtless known in Canada before Wolfe conquered Quebec. On June 19, 1792, Mrs. Simcoe, wife of the governor of Upper Canada, wrote in her diary regarding a visit to the chateau of the Baronne de Longueuil, near Montreal: "Ice-houses are a general here, but seldom used for the purpose of furnishing ice for a dessert, as the Canadians are fond of drinking hot butter and the ice-houses are used for larders to keep meat."

Must Protect Forests

Man Fined As Powell River Fire Is Throwing Away Lighted Match

At Powell River the other day, a man was fined $25 for throwing a lighted match from his car. The fine was not large, but if he cares to, he can appeal upon their seat and upon the wisdom they showed in starting their campaign against the careless in a town like Powell River where the livelihood of every man, woman and child depends directly upon the preservation and protection of the forests.—Vancouver Province.

B.C. Apple Crop

In a revised estimate of the apple crop of the Okanagan, Similkameen and main line districts, the provincial department of agriculture now places this year's crop at 2,217,000 boxes as compared with the 1925 apple crop of 2,553,449 boxes. Part of this increase is shown in the northern part of the district, which last season endured a short crop owing to severe winter weather in 1924.

Tokio Exhibits Deserted Trees

Dwarfed trees, three hundred varieties of them, were recently exhibited in Tokio. Some of the trees were only a foot high, but as perfect in detail as any monarch of the forest. Some were sold for 20,000 each. Every one of the trees usually exhibited. They are skilfully fed starvation portion of water and shaped with shears.

Heaviest Bunch of Bananas

The heaviest bunch of bananas ever seen in London bore 260 bananas. The stalk alone weighed 128 pounds.

Unofficial Estimates

Unofficial estimates prepared by authorities of the United States department of commerce forecast an expenditure this year closely approaching $500,000,000 by American tourists in Europe. To this they add $190,000,000 as the amount likely to be spent by Americans visiting Canada, bringing the total of this item, tabulated as an "invisible export," to $690,000,000.

The amount spent in Europe, Canada and other foreign countries by American tourists this year may reach a much higher figure, as foreign travel this summer increased in volume, due in large part to lower rates for certain classes of steamship accommodation.

It is too early to determine, officials said, whether the alleged maladjustment of American tourists in Paris, and the ill-feeling aroused in France and England arising out of the later-alleged debt situation, have seriously affected the status of American travel in Europe. Department of commerce officials were inclined to believe, they said, that the troubles reported by the American tourists in France have not discouraged other Americans who plan to make their visits abroad.

It was pointed out that whereas England in 1925, paid only $187,000,000 in interest on its debts to the United States, American tourists that year spent there at least $440,000,000, according to figures prepared at the department of commerce.

Similar expenditures of American tourists to Canada as reported from official and semi-official sources show a total of $40,000,000 for the same year 1924. Approximately 2,000,000 motorcars carrying 5,000,000 people entered Canada from the United States in 1925. These tourists probably spent $145,000,000 in addition to $45,000,000 estimated to have been spent by American tourists arriving by rail and steamer.

The total spent by American tourists in Europe, Canada and elsewhere comes to $620,000,000. To this may be added $70,000,000 for the expenditures of American residents abroad more or less permanently.

Free Homestead Lands

Still Available in the Three Prairie Provinces

In July of this year, a total of 638 homestead entries were registered by the Dominion Government department of interior compared with 468 in July, 1925. Of the 638 entries 400 were taken by settlers from the United States, the largest total of any nationality. The Edmonton district recently created, received the most with a total of 192. The Prince Albert district came next with 185 and Moose Jaw with 181.

Homestead lands in free grants of 160 acres are available to settlers in the provinces of Manitoba, Saskatchewan and Alberta and in the Peace River block and the railway belt of British Columbia by payment of a registration fee of $10. If a settler is no British subject he must declare his intention to become one or lose his homestead rights. Those homestead lands owned by the Canadian Government are now a considerable distance from railway facilities, but there are millions of acres of good farm lands in Western Canada near railways that can be purchased from $15 to $20 an acre.

Indians' Prayer Answered

Members of Hopi Tribe Stage Annual Dance For Rain

Washes that seemed but harmless sand depressions in the desert, as well as streams and rivers flowing with the weird ceremonial of the Hopi Indians' snake dance at Flagstaff, Ariz. came in answer raging torrents of muddy water within two hours after this year's prayers to the gods for rain to relieve drought.

The dance comes annually after eight days of preparation.

Last Friday night followed the dance and several motor cars were wrecked.

Will Junk This Year 1,000,000 Autos

Intensive studies by automobile manufacturers indicate that no less than 1,500,000 automobiles will be junked this year due to old age, accidents and other causes. Figures for the summer indicate that the number released from service will rapidly increase from year to year, until in 1928, 2,500,000 will be junked, it is said.

The American Idea

Ideas or beauty differ. The French president has refused to give his assent to a proposal for the erection of an eyesore in Paris, on the ground that such a building on the city's horizon would mar the regularity of the scene. The American idea seems to be that the more the regularity of a landscape is marred for the promotion of business the more beautiful it is.—Woodstock Sentinel-Review.

Delicate Woman

Policeman.—"It seems to be your fault, mister. It's a wonder you weren't killed." Why didn't you put on your brakes?"

Motorist.—"My wife wouldn't let me. She says squeak and make her nervous."

College Students With Harvesting Outfits

Here is a group of over 40 husky lads from the War Agricultural College, Kegs, England, and from Queen's University, photographed at the Canadian Pacific Railway station at Winnipeg, where they arrived from England recently to do harvesting in the prairie provinces. The boys have been placed by the Women's British Emigration League, two of whom especially are being photographed with the group. The young men came from all parts of the Motley Country, and are members of prominent families there. The arrival of such a group is only another indication of the type of men who are employed throughout the west on harvesting outfits. Besides affording them the opportunity of building up physically, those young men realize that in no better way could they become conversant with agricultural conditions in the Canadian west. They will return to their school in England at the end of October.

WORLD HAPPENINGS BRIEFLY TOLD

Official statistics show that 5,374 persons have already been killed this year in 66 United States cities as the result of motor accidents.

After having been in Brazil for several weeks giving lectures and in other cities, Mme. Curie, co-discoverer of radium, sailed for her home in Europe.

Broadcasting in the British Isles is controlled by the British Broadcasting Company, which has the right to collect an annual fee from all owners of receiving sets. Its entire licenses have been provided with astonishingly good re-ordinated programmes from a great many stations, and most of the important national events are broadcasted. Next year this company is being taken over by the British Government Broadcasting Commission and it's proposed to the other parts of the United Kingdom of Nations will be for the building of eight high-powered stations, eight special receiving stations and six repeating stations. By these means it will be possible to broadcast from any part of the empire to all other parts of the empire and foreign countries, and have hundreds of millions people within the British empire, but also a hundred million outside of it, enjoy the benefits of the broadcasting along the route of transmission.

With Daventry, England, as a starting point, the programmes from there would be the first relay station—a distance of 2,440 miles. Moncton would receive the programmes from Canada, with intermediate stations in various parts of the Dominion participating in the broadcasting distribution. Land lines would be employed to carry the programmes to Vancouver, on the Pacific coast, a distance of 2,500 miles.

The government is now investigating the leather industry in Canada, with the object of introducing this animal into the northern part of the Mackenzie district, which is the home of a considerable portion of Canadian Eskimo population.

Four hundred Mennonites are expected to reach the west before the snow flies, according to Bishop David Toews, chairman of the Mennonite colonization board, after a settlement board. Most of the newcomers will be placed on the land immediately on arrival.

Drivers of busses and street cars in Paris recently had grievances to air, followed by their leaders in a strike they showed their feeling by driving their vehicles at a snail's pace. Whenever a policeman ordered them to cease the street the driver would stop, remove his cap and bow.

Canada's National Song

Few People Know Late Judge Weir Or Montreal Was Author

Almost everybody in Canada has sung "O Canada" on numerous occasions, but it is doubtful if more than a handful of people could name the author of the current English version, the death of Judge Weir, of Montreal, has effected that the distinction is, his, and may improve it up the minds of many who perhaps never before knew the name of the writer of our national song. The song is less than twenty years old, and although it is sometimes criticized, is the best expression of Canadian sentiment and loyalty we have. So long as our people are inspired to rise to their feet and sing it with pride and spirit, Canada is safe for itself and for the British Empire.

Australia's Sheep

Australian experts estimate that century's sheep population at fifty million head. Last year 45,500,000 sheep and lambs were shown and this year's lamb crop is expected to be a record.

As A Special Favor

Grimshaw—What's that musical instrument you play from 10 until 2?

Neighbor.—"A sliding trombone."

Grimshaw—Would you mind sliding it to the ash can?"

A dead man is of as much use in the world as a lazy one—and he takes up less room.

Ambitious Plan For Empire Broadcasting

If Adopted, Audience of Hardly Millions Would Benefit

An audience of a hundred million people! Half a billion! Within two or three years this may be a very real fact if the plans of the British Broadcasting Company and the British Government are approved by the various parts of the empire and their new scheme of natural influence is put into being.

Broadcasting in the British Isles is controlled by the British Broadcasting Company, which has the right to collect an annual fee from all owners of receiving sets. Its entire licenses have been provided with astonishingly good re-ordinated programmes from a great many stations, and most of the important national events are broadcasted. Next year this company is being taken over by the British Government Broadcasting Commission and it's proposed to the other parts of the United Kingdom of Nations will be for the building of eight high-powered stations, eight special receiving nations and six repeating stations. By these means it will be possible to broadcast from any part of the empire to all other parts of the empire and foreign countries, and have hundreds of millions people within the British empire, but also a hundred million outside of it, enjoy the benefits of the broadcasting along the route of transmission.

With Daventry, England, as a starting point, the programmes from there would be the first relay station—a distance of 2,440 miles. Moncton would receive the programmes from Canada, with intermediate stations in various parts of the Dominion participating in the broadcasting distribution. Land lines would be employed to carry the programmes to Vancouver, on the Pacific coast, a distance of 2,500 miles.

Provincial History

British Columbia Has a History Full of Romance and Interest

All who have an acquaintance with the history of British Columbia will sympathize with the appeal made by Mr. Justice Murphy to the Rotary Club that special courses should be given the story of the birth and development of our province be instituted in our schools. British Columbia has a history which, for romance and interest, need not take a second place to that of any province in the country. She has heroes who compare favorably with those of any land. Conditions existed here and there a spirit of heroism and endurance and self-sacrifice and resources that would inspire the pen of any who heard them. They are well worth telling and they should be told.

British Columbia has numerous problems to solve. Largely, they are the problems of the pioneer, and as the province is settled. During the summer the mothers best friend is Baby's Own Tablets. They regulate the bowels, sweeten the stomach and drive away trouble. The Tablets are sold by medicine dealers or by mail at 25 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

A De Luxe Street Car

London Street Cars Are To Be Like Limousines

Their ability having been brought into doubt, London's street cars may still be saved by luxury.

By way of experiment the London council recently put a de luxe street car in operation along the Thames embankment. It contained seats as comfortable as those of a limousine. Special attention was paid to the lighting so as to enable passengers to read their newspapers without straining their eyes.

So popular has the car proved with passengers that the council has decided to order 100 more of the same kind.

"As people get older and see real trouble they wonder why they ever cried because it rained on the picnic day."

FOR "Cholera Infantum" MOTHERS SHOULD USE

DR. FOWLER'S EXT-OF WILD STRAWBERRY

This valuable preparation has been on the market for over 80 years, and has an equal for offsetting the vomiting, purging and diarrhea of cholera infantum.

Put up only by The T. Milburn Co., Limited, Toronto, Ont.

"Ideal Fashions" by Pearl Belle Hamilton

A Smart All-Day Frock

The combination of materials offers alluring possibilities for the semi-tailored model pictured here. The blouse which has both sides of the front buttoned onto a narrow vestee, ends in points, and has a simple convertible collar, and kimono-sleeve shoulders. The skirt is plain at the back and gathered in front between the points of the bodice. The long tab sleeves are gathered into narrow wrist bands. No. 1409 is for misses and small women, and is sized 16, 18 and 20 years. Size 18 years (36 bust) requires 3 yards 39-inch figured material, and ⅞ yard plain contrasting, or 1¾ yards if made all of one material. 26 cents.

Our new Fall Fashion Book; How to Sew, will be of interest in every home dressmaker. Price of the book 10 cents the copy.

SUMMER HEAT HARD ON BABY

No season of the year is so dangerous to the life of little ones as is the summer. The excessive heat throws the little stomach out of order so quickly that unless prompt aid is at hand, the baby may be beyond all human help before the mother realizes he is ill. Summer is the season when Diarrhoea, Cholera Infantum, dysentery and colic are most prevalent. Any of these troubles may prove deadly if not promptly checked. During the summer the mothers best friend is Baby's Own Tablets. They regulate the bowels, sweeten the stomach and drive away trouble. The Tablets are sold by medicine dealers or by mail at 25 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

Worms in children work havoc. These pests attack the tender lining of the stomach and bowels, where their ravages undisturbed, will ultimately prove fatal to the child unless these worms are of the book variety. Relieve the little sufferer from worms by using Baby Own Tablets. Miller's Worm Powders will not only exterminate these worms, but the tablets will also serve to repair the injury they have done.

Granting Of Titles

Canadian Bar Association Favors Restoration of Custom For Canadians

A resolution favoring the action of the Canadian Parliament in passing a resolution requesting His Majesty the King to confer titles, dignities or like honors on subjects of His Majesty residing in Canada, which was presented by F. H. Peachenbaugh, K.C., of Toronto, and seconded by R. G. Debenter, K.C., of Montreal, and referred to the executive committee, was one of the features of the opening session of the thirteenth annual meeting of the Canadian Bar Association, held at St. John, N.B.

Swindled

Farmer Cornfield—"Was that newfangled incubator you bought much of a success?"

Farmer Newfodder—"Success? I've had the dang thing sittin' in the hog house for almost a year and there isn't a sign of an egg in it—let alone a chicken!"

Button—"You say your grandfather was a sort of high strung chap?"

Chadbourne—"Yes; they hung him from a high bridge in Arizona for horse stealing."

Non-Stop Elevators

Some of the taller buildings at Stockholm are being equipped with non-stop elevators. They move slowly and continuously from floor to floor. The passengers must leap to and out

"The Dead Point" In Canadian Progress

By C. W. Peterson

The Great War and its aftermath of economic misery in Europe demonstrated the dire social effects of over-population in highly developed countries. Nature, however, has a way of effectively compensating for such conditions, and we are now witnessing the operation of this corrective process in the rapidly falling birth rate of the more advanced countries of the world. It is, however, an open question whether such over-population brings in its train greater economic evils than under-population in an undeveloped country of such enormous extent as Canada.

A young country of vast natural resources obviously faces difficult problems of administration. Such resources lie dormant until the magic touch of man and capital render them available. And until they are made available and contribute to the national wealth they cannot be taken seriously as an asset. All this involves the opening up of the country with the concomitant in terms of great expenditure of engineering skills, lies of various kinds and for providing such amenities as will attract the households and capital, governmental and municipalities are consequently faced with perpetual demands on their credit and revenue, all of which add up to the burden of taxation. If this, in turn, becomes too high, it acts as a serious deterrent to capital and immigration.

Now countries, therefore, normally graphic "between peak and valley, deep, blue sea," until they successfully overcome the "dead point" in the revenue curve which follows populating a population and general development approximately sufficient to absorb the capital so far ventured. Inasmuch from the earlier stages of developing conditions. Canada just now is drifting about in the doldrums of this difficult period, obviously carrying a heavy burden, public, private and corporate, of every sort of modern facility, to accommodate a population of a size that is destined to be many times greater than what it is today. So the outstanding problem in connection with Canada's future is how to augment rapidly our insufficient agricultural population. Compared with this, all other issues are insignificant.

There has always been a deplorable tendency on the part of Canada to follow blindly in the admigrattrice footsteps of the United States. This was never more true than when laboring under wartime emotionalism, we adopted drastic exclusion regulations, the imposition of a head tax and quota law south of the line. We never stopped to consider that the United States population is three times as great as ours, and that such measures until her population exceeded a round hundred millions and she was on the verge of being overpopulation of foodstuffs. We cannot possibly escape the conclusion that the United States, in her great, unprecedented success within a similar period, we would apparently have reason to be grateful for the liberal policy which we can accomplish this through immigration policies proceeding in the opposite direction, in those that made the U. S. great is, however, open to serious doubt.

Well-known Rates Expert Retires

W. B. Lanigan, general freight traffic manager, Canadian Pacific Railway, has retired from his position in the company after forty-two years' continuous service. Mr. Lanigan is recognized as one of the outstanding authorities on rail rates on this continent and was handling these questions long before the Board or Railway Commissioners came into existence. His wide experience will still be at the disposal of the C.P.R. since he is retained in the company's service for occasions when his expert knowledge may be required." Obituaries, he will be living in Victoria, B.C., where he will devote himself to his favorite hobbies, playing golf and raising cows.

Invents Instrument To Analyze Brain Power

German Scientists Calls New Apparatus a "Diagnascope"

Dr. Zaccharais Binsky, a Ukrainian scientist living in Berlin, has perfected a new psycho-electric apparatus known as the "Diagnascope."

Extraordinary claims are made for this instrument. It is said to be able to register mental capacity and aptitude by accurately measuring the time it takes for the brain to receive and transmit impressions. Binsky submitted the invention to a number of leading scientists, and they declared that it was a genuine discovery.

The "patient" sits before an apparatus resembling a medium-sized wireless set. On the table is a number of wires. To the end of one of these is attached a metal rod which is grasped firmly by both hands. Something resembling a pair of head phones is then fitted over his head. The current is switched on and the doctor proceeds to pass an electrode over his head and face.

A secretary from time to time takes down figures read off the instrument by the doctor; the entire procedure lasting about half an hour.

The apparatus, by establishing electric contact with the various nerve centres of the brain, is said to register the most delicate shades of mental intensity. Dr. Binsky subsequently draws up a report from the figures obtained and gives his diagnosis of the case.

Fired Last Gun

Last Shot in World War Was Fired Before Peace Was Made

The last gun fired in the great war was on the Canadian front, and that by a British battery, which had been overlooked in the delivery of the armistice message until well on in the afternoon of November 11th, 1911.

This was disclosed at the reunion of the 2nd Heavy Battery C.F.F. Old Boys' Association, held recently by Brigadier General A. G. L. McNaughton, C.M.G., D.S.O., deputy chief of staff, Ottawa, and commander of the Canadian heavy artillery during the war. General McNaughton was replying to the toast: "The Canadian artillery."

The gun which continued the conflict for four hours after the warring nations had agreed to call it a day was an imperial 12-incher, which had made its replacement on the Canadian front near Mons in order to reach its target, a railway station far behind the German lines. The firing, said the general, was effective.

This particular unit was overlook ed when the instruction to "cease fire" was issued and did not receive the order until 2 o'clock in the afternoon.

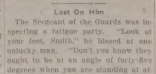
Lost On Him

The Sergeant of the Guards was inspecting a fatigue party. "Look at your feet, Smith," he hissed at one unlucky man. "Don't you know they ought to be at an angle of forty-five degrees when you are standing at attention? There might as well have been no war for all the good it's done you!"—Sporting and Dramatic News.

Experimental telephone lines between the engine and caboose of long freight trains have proved effective time-savers in operation on the Perim, according to officials of an eastern railway.

Ordinary wheat flour becomes an explosive if the air in a closed room is saturated with it and ignited.

The earth's daily rainfall amounts to about 16,000,000 tons a second.



MILK BOTTLES THAT SPEAK

Let your milk bottles say "Good morning" to your customers. Appleford caps, bright and cheery, tell each customer of the purity and quality sealed within.

As an advertising medium, Appleford caps are unexcelled. Their clear-cut printing reflects the cleanliness of your dairy. We will make a distinctive design which will help also to sell your other products—such as butter or ice cream.

SUNDAY SCHOOL LESSON

SEPTEMBER 19

OBEDIENCE TO LAW (TEMPERANCE LESSON)

Golden Text: Drink no wine nor strong drink, thou, nor thy sons with thee, Leviticus 10:9.

Lesson: Leviticus 26.

Devotional Reading: Proverbs 23:29-35.

Explanations and Comments

Promises of Blessings to Those Who Obey the Law, verses 3-13.—With reference compare Deut. 28:1-14; Dt. 28:1-11. Bacon was right when he declared that "Prosperity is the blessing of the Old Testament." If Israel is faithful, if she keeps the laws, she is here promised the blessing of fertile land—the products of the ground, of the fruit and the grain shall be hers.

"A truly modern mind scorns the idea of God's blessing, but would be affected by immorality. Yet here in the whole of Mosaic code we show that misgovernment can make a garden into a desert. Where certain conditions once covered the country with fruitful gardens and luxuriant cities, there are now in the land of the Tigris and Euphrates a few handfuls of squalid huts. The fertility of the country has disappeared. Irrigation which was made all this live have been gradually filled with drifting sand, and one of the most populous and fertile countries of the world has become a desert. In Palestine the same thing may be seen. Under Turkish domination the character of the soil changed in many places, where in ancient days the vines were terraced to the hills, the sweeping rains have had their way and the very soil has been carried off, leaving only rocks to glitter in the pitiless sun" (Andrew Harper).

After Four Hundred Years

Basilica in France Dedicated To Joan Of Arc

The Basilica which King Charles VII. vowed he would build if Joan of Arc succeeded in driving the English out of France has at length, more than 400 years ago, was consecrated at Domremy, the birthplace of the national heroine.

King Charles VII. failed to fulfil his promise, but it was not forgotten, and the people of the village were left with flags for the ceremony which began with ecclesiastical pomp.

The church was thirty-seven years in building. It is ornamented with frescoes of the chief events in the life of the peasant girl who had the vision which led to the church. The main altar is considered a work of art worthy to rank with any in the nation's churches.

The church faces the little house on the hill where Joan was born and which, after the years of neglect, whose in the Great War the contenders of Joan's day also fought for the liberty of France from foreign occupation.

Ticket Includes Insurance

Passengers on German Aeroplanes Are Well Protected Against Accident

Every time a traveller goes up in the air on one of Germany's seventy-five aeroplanes he is insured for 16,000 at the expense of Lufthansa, the concern which operates these routes.

Flying in Germany is considered quite as safe as travelling by train or motor car. The insurance companies with which Lufthansa has contracted for the insurance of passengers charge merely the usual accident rate, although the air-cargo consignment in the case of "extra-hazardous occupations."

According to official statistics the percentage of safety in German aeroplane flights during 1925 was 99.997 per cent. Thus far during 1926 not a passenger has been injured.

Want the Right Kind

According to the Bishop of London there are a million and a half of the right sort of people in the Old Country who are ready to come to Canada and help to make a great nation of it.

And, no doubt, Canada will furnish the welcome as soon as it is assured that they are the right kind of people.—Woodstock Sentinel-Review.

Lakes Will Go Dry

Delicate surveys, show that the earth crust in the Great Lakes region is gradually tilting toward Chicago at the rate of 9 or 10 inches a century. If that keeps up, Lake Michigan will spill into the Mississippi in 50 years, and Niagara Falls will be dry in 2,500 years.

After winning a woman's hand a man sometimes finds himself under her thumb.

Bachelors are women's sight and widowers are women's hefts.

Curfew Law In Chicago

Edict Goes Forth That Gives Much Trouble to Policemen

Time turned back a generation or two in Chicago, a metropolis of city of 3,000,000 revived the curfew law of its innocent village days, but policemen, charged with the duties of the rejoining generation, found enforcement a matter of considerable difficulty.

All unescorted boys and girls 16 years old or under must be off the street at 10 o'clock, the city fathers have ruled, in an effort to halt a long record of attacks and kidnappings, and 2,000 cops were sent forth to enforce the edict.

Then their troubles began for they reclaimed that with the prevailing mode of short skirts, rolled hose and bobbed hair it was impossible to distinguish children from grown-ups. Several married women, well over twenty, were taken into custody as "children," while bewildered policemen who stopped "kids" were indignantly informed that their ages were above the curfew limit.

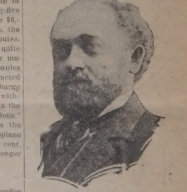
Parks were ordered closed at 10 p.m. and automobiles equipped with rolled country roads and lovers' lane.

Youngsters must do their courting hereafter in their own homes, it was said Chief of Police Collins. "Not that we want to be old-fashioned, but enough is enough and something has to check dangers to themselves."

Answer to Last Week's Puzzle

Gross Agricultural Wealth of Canada

Gross agricultural wealth of Canada at the end of 1925 was $7,322,-712,000, an increase of $343,000,000 over that of 1924, according to a bulletin of the Canadian Government bureau of statistics.



A Famous Man

The originator of Dr. Pierce's Golden Medical Discovery first, last, and all as the "Favorite Prescription" for women, was Dr. R. V. Pierce, a practising physician in Western Pennsylvania. He early moved to Buffalo, N. Y., and established The Invalids' Hotel, then he put up his home remedies in the World's Dispensary, where they were carefully prepared from roots, barks and herbs, and blood them with druggists all over the U. S. and Canada.

For over half a century, Dr. Pierce's Discovery, for the blood, has been sold in larger quantities by druggists than any other blood medicine. It is a tonic in its effect on the stomach and digestive apparatus; an alterative in its action on the blood, liver and skin. It increases the appetite, stimulates the digestion, enriches the blood, clears the skin of eruptions and blemishes, and makes both men and women feel as they did when they were young and care free.

Ask your nearest druggist for Doctor Pierce's family medicines, in tablet or liquid form, or send 10 cents for a trial package of tablets to Doctor Pierce's laboratory in Bridgburg, Ont.

Strange, Romantic Love Adventures of the Flapper you know!
Joanna
by H. L. GATES
Copyright 1925 by H.L.GATES
Published by arrangement with First National Pictures, Inc.

CHAPTER XIV.—Continued.

She talked on, saying things that were reminiscences to Joanna, the odd things that had to do with the beginnings of a new friendship and the prospects of a "jolly" time for the girl in a new life. A trim, lace-trimmed and white bead-dressed maid answered her summons and replied to her mistress's questions that Miss Manners' apartment was in order.

"I've a little bedroom and a cozy sitting room for you, not too far from my own," Yvonne explained. "I hope you will be content and comfortable."

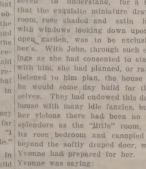
At a finger touch a gold panel in the wall of the reception hall slid back, disclosing a tiny gilt elevator of the kind that is automatic. Yvonne led the way into the lift, and pushed the buttons that sent it climbing to one floor. Joanna was strangely tremulous. She wanted to fall bright things to the older woman who was showing her into these new and lustrous surroundings, but her mind was in an uncanny turmoil. Why was everything happening as it was? So natural and swiftly, so smoothly? Should she trust herself to Yvonne Custant?" She made a glance at the woman who stood so close to her, and comprehended her extraordinary fascination. She had that was not to be ostensible, the magnolia-white face dominating sharply with the two Nubian-black eyes, and the hair that were full and red without the exaggerations of lip stitch contours. The hour that withheld Joanna from alone with Brandon. The indubitable fear that seemed so unreasonable, gripped her here in Yvonne's home. She quickly flashed to what Teddy Dorminster had said in the room downstairs: "A stage, or an opera, or something like that?" What was there wrong about her? She had on her grey tailored suit and dark coat. And her cream, grey cloche hat was from a famous Avenue shop. Did she still remind one of the gift counter? And if she did, what of it? Weren't the imitations of the silk counter all right? Certainly there had been no girl in her merry party at Atlantic City who was skidding crowd, who could profess to excuse men's wiles to need consolation because of them. But, of course, Yvonne had not been serious! It was just a manner of talk; the small talk she would learn to know.

All of these things flashed through the girl's agile mind while the fluffy maid elevator lifted from the first floor to the third, and the door was opened, and the maid had slid open the narrow gilded door and stepped out. Joanna did dispersed her doubts with a determined wave of confidence. The arrogance came back into her eyes and

EXPECTANT MOTHERS
Read Mrs. Menard's Letter. Her Experience May Help
Chatham, Ontario.—"I want to tell you how much good your medicine has done me. Before my baby came I felt so weak and run down that I could hardly do my work. My head ached continually and I was so discouraged that I could cry. Every morning I had another baby just as year and a half old and it gave me a bit to do. So I thought I would try Lydia E. Pinkham's Vegetable Compound, as I had read so much about it in the little books. I found a difference right away as my head was relieved and my tired feelings gone. My sister had been using my washing and also continued doing it, as she said it might set me back if I started to do it again. I'm sure did help me and I had taken just two bottles when my baby came. He is a fine big boy, now nearly five months old. I am taking your medicine again and I am able to do my work all by myself now. I always recommend the Vegetable Compound to women, and especially to expectant mothers, as I believe it has been a help at those times."—Mrs. OLIVE MENARD, 54 Foster St., Chatham, Ontario. C

It was difficult for "Miss Twenty-seven" to understand, for a time, that the exquisite miniature drawing room, very shaded and satin hung, with windows looking down upon an opera garden, was to be exclusively her's. With John, through such evenings as she had consented to stay in with him, she had planned, or rather, listened to him plan, the house that he would some day build for themselves. They had endowed this dream house with many idle fancies, but in her riotous there had been no such splendors as the "little" room, with its rose becomon and canopied bed beyond the softly draped door, which Yvonne had provided for her. And Yvonne was saying:

to her lips. "She'd get on, or she'd taken an awful wailey trying."



Yvonne swept the girl's face with a quick glance. "What do you know about me?"

"You will want your own maid, of course. But I haven't engaged one. You will want to engage her yourself. I fancy Walker can send you a collection of them—he has a way of producing them from the air, I've decided. I shall advise a French girl, or an English one. The first will be more stylish, the other more "safe." Joanna couldn't stifle her laugh. "You'll have to tell me what to do because—I don't know," she explained. "I'm something like a phantom of years hovered suddenly in the deep brown eyes. "You know, I feel rather alone," she said, "and terribly afraid—of myself, I mean."

Yvonne swept the girl's face with a quick glance. She spoke quietly to the maid who fluttered about the room. The maid went out, closing the door of the room. To Joanna Yvonne said: "Come and sit down." She indicated the divan beside her. "If you'd like one there are cigarets in the box on the tabouret. I think I'll have one, too." Before she spoke again she drew a contemplative puff and allowed the smoke to curl slowly from her lips. Joanna watched her absently. Her first words were abrupt.

"There are a great many people who enjoy themselves talking about themselves," she said. "And some of them take an especial delight in talking in whispers. What do you know of me?"

These were tactics that would not disconcert Joanna. She was too accustomed to making sudden attacks herself, or defending them. "Only what everybody knows," she replied frankly. "We read about you, you know, and your pictures always are in the newspapers. I've thought more of you than I ever did of a motion picture star, and that's a fact."

"Why?"

This was more difficult. The girl hesitated, faltered. Again Yvonne's voice, clear, bell-like, clipped the one word:

"Why?"

"I think," Joanna ventured, "it's because you make people talk about you. Wherever you go, and whatever you do, people talk about it. It's being famous and besides, being famous for yourself, not for what you do. And you have such a wonderful round of pleasure."

Yvonne contemplated her cigaret again, blowing the hazy drifting of its wraith of smoke. "No," she said, "that is not the reason you have been interested in me; and it is not the reason you were so willing to come to me when I invited you." A smile suddenly played at her mouth and she nodded at the girl on the divan beside her. "Is it?" she insisted.

Joanna smiled back at her. "No, I don't think it is, altogether," she agreed briefly, "but that is as close as I can put into words. You see, all my life, that is, since I've been alone and making my own way, I've had to be hard to keep up with the crowd. I've wanted things that cost money, and I've wanted things that you can't have, or enjoy, when you're skimped. The things you need to make a show. The best I could ever do was owe somebody installments on a dress or a wrap or my shoes, and keep my eyes open for cuts in my allowance. I've looked all right, and I've laughed a lot, but things have always happened to make me cry, too."

Again that bell-like voice of the older girl clipped off a question: "What, for example?"

Joanna studied a moment, her eyes looking out into the garden. "There were just such little things," she protested; "things you wouldn't understand."

"I think I would understand," Yvonne persisted.

"But you wouldn't," Joanna agreed. "One like you simply would not. I've cried my fool eyes out, often, because it would ease my ball for them to stay square. And I've had nobody to talk anything over with. Mostly, people like to talk while to talk to make me tired—I mean, they don't know. When I cut my hair they thought I was foolish to attempt it, to go off alone on a party they didn't ought to be in a harem. When they tell me I don't act like the girls of yesterday I have to say who cares to hang about yesterday when there's so many todays and then I'm told I'm not half bad. Once in a while I get so cut up about it that I have to have a cry." She thought she finished abruptly, and smiled a little at the futility of her explanations. But Yvonne displayed no amusement. She said very quietly:

"And don't you think that I am cut up a bit, now and then, when the people who accept worth while, as one of them, interpret me as both plain bad and fancy bad? Perhaps I am. They find different ways to label everything, but—well," she broke off, and was silent for a brief moment. "Well, you see that I do understand, after all," she added. And then: "You were glad to come to me because you knew I'm of today, and not yesterday; that I am the proof of all your little theories of what a woman ought to be today—isn't that it?"

(To be continued)

Using More Electricity

Rapid Increase In Power Generation In Canada

The amount of electricity generated in Canada for Canadian use during the first five months of 1925 surpassed that produced in the corresponding period of 1923 by 25 per cent. Increased growth in Canadian use of electric power is indicative of increasing industrial activity since a much larger proportion of the electric power generated in Canada is used for manufactures than in more thickly settled countries where there is a larger proportional amount used for lighting. The rapid increase in power generation in Canada is due in some measure to the spread of home electric service but to large measure to the rapid installation of turbines for industrial use.

Advertising Lowers Cost

Takes Place of More Expensive Methods of Selling

The old indictment that advertising adds to the cost of goods has been answered by economists. Advertising is a medicine to aid in distribution. The public never questions the cost of a medicine. The manufacturers of chalk which adds to volume of production. If the public didn't pay for the new machine it would pay for the cheaper quality hand labor. No one is in the machine of modern advertising, wisely employed, a subject of query speculation as to cost. It takes the place of older, more expensive methods of selling and distribution.—World's Work.

The Wrong Method

"Tommy" said his mother, "grandmother is very ill. Can't you go in and cheer her up?"

"Yes, um," said Tommy, as he went into the sick room. But in a few moments he came out discomfited. "Couldn't, mother," he said. "She seemed to get worse."

"What did you say, dear?" asked mother.

"Why, I asked her if she would like soldiers at her funeral."

Flour Mill For Saskatoon

The Robin Hood Flour Milling Company, of Moose Jaw, it is reported, has purchased the Interprovincial Flour Mills at Factoria, five miles north of Saskatoon. The mill, which has a capacity of 600 barrels a day, will be overhauled immediately by the purchasers with a view to starting operations in October.

Pigeons Stop Clock

Homewives at Rushville, Ind., were irritated and husbands went hungry when pigeons roosted on the minute hand of a clock in the court house tower, slowing and stopped the clock for 40 minutes. The time read 5.40 when it really was 6.20 p.m.

Can Keep Wireless Conversation Secret

English Wizard of Air Has Invenii New Form of Telephony

The newest wizard of the ether is H. J. Chilsholm, a great nephew of George Birmingham, who has invented a secret form of wireless telephony.

He can scatter the spoken word all over Europe, but you cannot hear your neighbor tells a power station and a garage into a broadcasting studio with artistically draped walls. There is a deep hole in the floor of the studio, where he has made successful tests in earth transmission over a distance of 20 miles.

In the attic of the boathouse Mr. Chilsholm displayed three patent transmitters, but he explained that the germ of the invention is the receiving set, which picks up the signals straight from the peak of the outgoing wave. The receiver automatically tunes itself in, and, in addition, will work on the ordinary broadcast bands of wave length.

Wireless experts and other wireless wizards have been invited to Chilsholm's home to try to catch the wave words sent out by Mr. Chilsholm. Demonstration motor cars have disappeared from the side of Thanet, but none, so far, has been successful in picking up the secret broadcasting. The secret wireless laboratory is a model of perfect behavior. It never howls, never interferes with local broadcasting, and receives messages from the North Foreland. It is the Beau Nash as well as the Scarlet Pimpernel of the air.

Ancient and Modern

Continual Conflict In China Between Old and New Ideas

In China the conflict between the old and the new is constantly going on. Now it is the water peddler, whose screeching barrows are one of the picturesque features of the city, making a desparate fight against the modern method of distributing water through underground pipes.

Having failed to frighten consumers into refusing to use the city water by their scare-head stories, now to be published on the unsanitary character of the Pekin waterworks, the peddlers have begun to adulterate, leaving out gangs of coolies out to beat up workmen engaged in laying the pipes.

While the new system slowly is being extended, the water barrow still is in use. Its wheels are of wooden tube, still piles the streets delivering water drawn from shallow wells that dot the city's thoroughfares.

Although sixteen years have elapsed since piped water was established, the old system continues.

Would Not Utter Swear Word

London Actress Is Rewarded With a Shower of Bouquets

The use of one of the four letters meaning an extremely hot place, described in the Bible, was considered so indelicate by Miss Dorothy Minto at the opening of a new revue in London, that she declined to utter it.

"You go to——" was all she would say when she was to have spoken, but when the time came she merely said in a weak voice:

"You may go to wherever you like."

The press agents of the show had, by their machinations, worked the audience up to a state of expectancy that was ready for any indecency the actress, who had declared previously that she would not utter the word and there was not any indecency, and the ovation was given Miss Dupree and she was showered with bouquets.

Lost Two Hundred Years

Oldest Gate in England Restored to Oxford College

Balliol College, Oxford, has found a gate belonging to the college which was lost 200 years ago. It is probably the oldest in England, having been built for Balliol in 1285, according to the brochure record in the college books. For 500 years generation of belated students kicked the gate's bottom to get in after hours. Late in the eighteenth century the gate was missing after the quadrangle was completed. It is now being discovered, its oak panels well preserved under a hundred coats of paint, and has been repurchased by a group of graduates and given to the college.

DODD'S KIDNEY PILLS

Many Roman Relics Found

Iron Stylus Buried 1,900 Years Is in Perfect Condition

Many relics of Roman London have been discovered recently during the building purposes in Miles Lane, near London Bridge.

Although buried for more than 1,900 years, a five-inch long iron stylus was completely free of rust and the writing point and the engraved edges were as sharp as they could have been on the last occasion a Roman scribe used the pen on the waxed tablet.

A boxwood hair comb is in such good condition that it has the appearance of being almost new. The comb, to which strands of fine black hair were still adhering, measures three and three-quarter inches by three inches, and both the coarse and the fine teeth are as regularly and delicately cut apparently with a fret-saw—as is a machine-made article of to-day.

Excellent craftsmanship is revealed in the sole of a sandal—wood which used to leather and studded with hobnails similar to those used at the present time. The wood and the hobnails were carved to the exact shape of the wearer's foot. The upper portion of leather sandal, although of very thick leather, as it intended for the hardest wear, is of an elegant pattern.

A large quantity of Samian ware (60 to 100 A.D.) has been removed, also a portion of a pipeclay statuette of Venus, of the kind used by the Romans for household ornament.

It is on this site that a portion of a wall of thick timber proved to be part of the river frontage during the Roman occupation. Great precautions and precautions are being taken for the safe uncovering of the continuation of the structure.

Prince Talks Over Radio

Address At Oxford Interesting From Point of Pronunciation

It was interesting to listen to the Prince of Wales' address at Oxford over the radio from the point of view of the pronunciation controversy. The Royal family continues to say it is often. He says "die-rection" and "accoustics," and stresses the first syllable of "laboratory" and "preparatory." the Prince's English, "laboratory" is still an uncertain word, for he pronounced it the same as the accent on the lab, and then with the accent on the or. The royal seat that was best appreciated was the remark about the collar which came home "with an edge like a circular saw." It was an unexpected revelation; one had imagined that princes of the Blood were immune from these misadventures of lesser mortals.

Corns are painful growths. Holloway's Corn Remover will remove them.

Why Waste Money

Two Spaniards of haughty demeanor quarrelled, and, being unable to settle it amicably, like ordinary humans, they decided to fight a duel.

In order to perform this feat without actually losing their dignity, they thought it best to take a train into the country.

The first Spaniard booked a return ticket, but his opponent took only a single.

"Caramba!" exclaimed the first, "come back—eh, my friend. I always get a return."

"I don't," answered the other quite calmly. "I always take the return half from my adversary."

Isn't it queer that the things people usually want to know most are none of their business.

The pies that mother used to make required great skill, a hot oven and a boy appetite.

When the average man makes a mistake he tries to justify himself by referring to his good intentions.

Canadian Industrial Development

Assisting Manufacturers and Others In Locating New Materials

In pursuance of its work of advancing Canadian industrial development through the further use of Canadian resources, of advertising opportunities for investment of capital in prospecting, mining and recovering the wide variety of economic minerals both metallic and non-metallic found in the Dominion, of assisting manufacturers and others in locating raw materials for their products, the development branch of the Canadian Pacific Railway Company's department of colonization and development publishes a very complete set of file synopses or bulletin descriptive of these resources located along its lines. The revised issue giving all the latest information available to the end of 1925 has just been distributed to the permanent mailing list.

The set comprises 57 leaflets each containing from two to six pages. They cover all the important minerals and resources of the Dominion, including the fine forestry studies. Over 50 complete sets and a large number of individual copies of the latest revision have just been mailed from the Montreal office of the company's development branch. The writer or compiler of each synopsis is a man selected for his outstanding knowledge of the subject dealt with. Figures and statistics are taken from the most reliable from the Dominion Government bureau of statistics and other authoritative sources. The subject is treated as fully as consistent with a concise, summarized presentation of the facts in the most detailed possible form.

That business men, financial houses, mining interests, educational establishments and others find these publications of value is evidence by the fact that in the two years since the first distribution was made over 70,000 copies have been furnished on request, and the demand is increasing. Apparently they fill the requirement for a brief survey of each province from which the business man can obtain the salient facts he requires on the special subject of interest without the out search of voluminous reports or reference to books covering a variety of other irrelevant subjects.

Tennyson Refused Big Money

Declined $5,000 Offer To Write For Picture Postcards

Alfred Tennyson once declined an offer of $5,000 for 3,000 words of verse. The offer was made by Sir Edward Tuck, the picture postcard pioneer. Tuck's father, Raphael Tuck, had founded a firm making Christmas cards in London early. The son rapidly extended the business to the British Isles and then seized upon the coming of the penny post as an opportunity for enormous expansion. He obtained the aid of prolific writers and had only to ring for verse to every one of of the Royal Academicians with requests for new designs for cards. Some of them fought shy, with their dignity to accept his offer. Several famous poets wrote verses for him, but Tennyson turned them down.—Boston Herald.

Canadian Wheat For China

Exports of Canadian wheat and flour to China this year will show an increase of at least 25 per cent over last year's tradine, according to Charles M. Sun, Tetnstein, China, president of a large milling company now in Vancouver for the purpose of buying a large quantity of Canadian wheat. "This will be the biggest year yet in the grain trade history between Canada and China," he stated.

The Oil of the People.—Many oils have come and gone, but Dr. Thomas' Eclectric Oil continues to occupy a position and increase its sphere of usefulness each year. Its sterling qualities have brought it to the front and kept it there, and it can truly be called the oil of the people. Those who have used it, buy it and would use no other preparation.

Many Homestead Entries

Approximately twice as many homesteads have been taken up in the west this year as last. For the first nine months, the figures were 435,220 acres this year, as against 214,408 acres in the same period of 1925.

An unprofitable apartment house is a flat failure.

Little Helps For This Week

One only Ir the law giver and judge, even He who is able to save and to destroy; but who art thou that judgest thy neighbor?—James iv., 12 (R.V.).

Thou alone
Keepest Judgment for Thine own;
Only unto Thee is known.

What to pity, what to blame;
How the fierce temptation came;
What is honor, what is shame.
—Allen Carey.

God sees as altogether, not in separate feelings or actions as our fellowmen see, us. We are always doing each other injustice, because we only hear separate feelings or actions; we don't see each other's whole nature.—George Eliot.

No man can justly censure or condemn another because, indeed, no man truly knows another.—Sir Thomas Browne.

Woman Wins Air Race

Succeeds Easily at Pageant Held by Aviation Country Club

Mrs. Sophie Elliott Lynn, Britain's pioneer woman aviator, has won her first air race. Against a field of seven men fliers, including Sir John Rhodes, in a race of private aeroplane owners of the air pageant held by the Yorkshire Aeroplane Club, Mrs. Lynn won easily. Encouraged by her success, Mrs. Lynn may enter next season for the King's cup race around England which is the big aeroplane event of the year.

Vancouver Grain Port

Vancouver in the last twelve months exported wheat to Britain amounting to total of 21,641,000 bushels, so that of the total of 56,485,715 bushels going to Britain from Canadian ports, Vancouver had approximately 56 per cent. Of the 123,000,000 bushels of Canadian wheat shipped from Canadian ports to countries exclusive of the United States, Vancouver last year handled 23,000,000 bushels.

A gymnasium has been installed in passenger cars on a transcontinental railroad. Probably for the use of those who want to train to put up a window.

CANADA'S TRADE WITH THE UNITED STATES

Within the last decade the value of Canadian assets held by the United States has quadrupled. Every year for the last ten years approximately $200,000,000 has been added to the account, until today it is estimated that the United States owns $2,700,000,000 of Canadian assets, or $318 00 per capita of Canada's population. "How is this great debt going to be finally liquidated?" asks Mr. W. B. Morson, president of the Prosperity League of Canada. "There is only one thing we can do," he says in answer, "that will advance us toward a creditor position and that is to raise our tariff so as to balance our affairs with the United States." It is a self-evident solution to anyone who will take the trouble to think the situation over for himself. The reason for the rapid growth of indebtedness "selling out to the United States." Mr. Morson calls it—is that Canada has been taking annually hundreds of millions of American goods while selling the United States an amount of goods of much smaller value. In the 10 years from 1914 to the end of 1924, to be precise, Canada has bought from the United States goods to the value of $5,850,000,000 and sold so the latter country goods to the value of $3,850,000,000, or $2,000,000,000 less. This excess of purchases has been paid for with "our bonds, debentures, mortgages, stocks, factories, warehouses, etc." The consequence is that the United States has been busily employed "making goods for us that we could make ourselves; while it has induced the work in our factories, closed many of them, thrown our workpeople out of employment and driven hundreds of thousands out of Canada to seek employment in the United States." In other words, in the forceful language of President Morson, we are assisting the United States "to buy us out and place a mortgage on our country that advances us toward bankruptcy."

Hon. H. H. Stevens Issues Writ at Vancouver

At Vancouver on Monday morning Hon. H. H. Stevens, federal minister of customs and Conservative candidate in Vancouver Centre, caused a writ to be issued in supreme court against the Sun Publishing Company, Ltd., and Robert J. Cromie, claiming $150,000 damages for alleged libel because of the publication in the Vancouver Sun on September 7 last, of an alleged facsimile of a letter dated November 4, 1922, purporting to have been written by the plaintiff to the Canadian United States Oil and Refining Corporation.

Libel is also alleged for the publication in the same newspaper on September 10 last, of a statement that an application was being made to a judge to have certain books and records of this corporation sequestered for the alleged reason that it had leaked out that the directors of the corporation, including plaintiff, had arranged to destroy them.

Mr. Stevens further charges he was libelled in an editorial recently published in the Sun newspaper.

An injunction against the Sun newspaper is also claimed in the writ, which was filed by W. E. Burns, acting for Mr. Stevens.

Another Action in East

Issue of a writ claiming damages for alleged libel was to be made against the Toronto Star as well, on behalf of Mr Stevens.

Canadian Heir To Fortune in Ireland

W. H. Barrett, of Port Dover, Ont., accompanied by his wife and two sons, sailed from Quebec on Saturday for England, where he will claim a fortune of more than $1,500,000. He is the sole heir to the Quainton-Dick estates in Ireland, the title of which has occupied the English courts for 150 years.

for Economical Transportation

CHEVROLET

Forty feels like Twenty in the Smooth Chevrolet

NEW joys await you in the smooth Chevrolet. Here the exhilaration of speed is combined with a quiet, effortless performance that betokens twenty rather than forty or fifty miles per hour. Here is no need to raise your voice to be easily heard, no matter how fast you may travel.

Here is an absence of vibration that you never dreamed a four-cylinder car could possess.

Here is Economical Transportation coupled with a comfort almost luxurious in a car that reflects in its appearance the quality which makes possible such smooth performance.

To realize how fully the smooth Chevrolet answers your every need and desire—you must see it—ride in it—drive it.

Then—and then only—can you appreciate how amazing is its Value.

The GMAC Plan provides an economical method of paying for your Chevrolet on time.

The Executive Chevrolet is Chevrolet history in selling at the Lowest Price for which Chevrolet has ever been sold in Canada.

A. C. PULLAR, Agent, Central Garage, Delia

Local and District

BORN—To Mr. and Mrs. John Blair, at Drumheller Hospital, on Sunday, Sept. 12, a son.

* * *

Messrs. King and Murdock shipped a carload of horses last week.

* * *

On Tuesday it was reported snowing in Edmonton and raining in Winnipeg.

* * *

Mr. MacMillan, of Red Deer, is visiting his daughter and son-in-law, Mr. and Mrs. J. J. Bradford.

* * *

Alexander Beaton left Tuesday to attend school for the deaf and dumb at Winnipeg, Man.

* * *

The infant daughter of Mr. and Mrs. Geo. Lowe died on Wednesday last, and was interred in the Delia cemetery.

* * *

Stan. Walker, proprietor of the Queen's Hotel, made a business trip to Calgary on Sunday, and returned Tuesday night.

* * *

Miss Schafer, of Vernon, B.C., visited her brothers, C. S. and Levi Schafer, last week. On her return journey home she was accompanied as far as Calgary by her brother, C. S. Schafer.

* * *

Harold Poland had the honor of delivering last week the first load of new wheat. It was sold to the Wolfe Elevator Co., and was a good sample of No. 1 Northern.

* * *

Mrs. J. F. Ethridge, of Calgary, has arrived, and is staying with her daughter, Miss L. Ethridge, teacher of Grades III., IV. and V., at the Delia public school.

* * *

The Ladies' Aid of Delia United Church will hold a sale of home cooking and garden produce on Saturday, September 15th, in Mr. Kennedy's drug store. 36 7a

* * *

Simon Elliott, who recently purchased the old McCarty garage, on Main Street, from R. C. Robert, had it razed, and has now hauled the lumber out to his farm.

* * *

Don't forget the sale of millinery, felt and dress hats on Friday, Saturday and Monday, under the auspices of the Delia Ladies' Aid, in R. A. Stewart's hardware store.

* * *

The voting at Delia in the federal election held on Tuesday last was as follows:—Robert Gardiner (Progressive), 71; Dr. G. H. Wade (Conservative), 70. Out of a poll of 262 voters, only 141 voted.

* * *

We regret to say that the infant son of J. Deschesne passed away last Monday morning, from cerebral meningitis. The funeral services at the house, conducted by Rev. J. R. Geeson, was largely attended. The body was interred in the Delia Cemetery.

* * *

Voting in the federal election took place in the Town Hall on Tuesday. L. Stephens acted as commissioner and deputy returning officer. The other officials were: W. A. Low, Barrister; Geo. Dunfield, and Jas. Clark. At no time was there a rush of voters.

* * *

Given two or three days ideal weather, harvest operations again came to a halt on Tuesday. Zero weather was experienced, and the rain that had been threatening all day, fell heavily at night, accompanied with sleet and snow. Cutting is pretty well finished around here and to the south, but south they are not nearly so well advanced, where the crops are heavier.

Sentinel Hill School Fair

The most successful fair in the history of the Springwater School Fair Association was held at Sentinel Hill School on Friday, Sept. 10th. The fair was under rather a handicap this year, too, as of the seven schools in the association only Majestic School had entered the same teacher. The six new teachers were unused to school fair work, but nevertheless took hold of it in a very capable manner. Despite unfavorable weather conditions a large crowd was present. There were nearly eight hundred and fifty entries, which would have been increased to over one-thousand had the day been fine. It is very encouraging to the committee in charge to see the increased interest taken each year. An open invitation is extended to all surrounding school districts to join the association.

Mr. Limpert, the president, has donated fifty dollars to the association. The said donation was to be given if there were twenty calves and twenty pigs exhibited, but on account of the rain the exhibits did not come up to the required number. Nevertheless Mr. Limpert has taken this into consideration, and has been kind enough to donate the above sum.

The agricultural, cooking, sewing and manual training exhibits were judged by the teachers from the School of Agriculture, Olds, whilst the school work was judged by Inspector Haverstock. The livestock judge stated that the exhibit was the best he had ever judged. The lady judges of the cooking and sewing work well pleased with what they expressed as the hardest task they had ever had, as the exhibits were of such a high quality. As Old Sol was kind enough to show himself in the afternoon, the field interesting sports were run off, in charge of Mr Lowe, teacher of Sentinel Hill School, assisted by Mr. Morris, teacher of the Farrer Lake School.

Following is a partial list of the prizes won. In some classes there were as many as nine prizes given, but we are publishing only the first three on account of the lack of space:—

VEGETABLES

Parsnips—1, William Cox; 2, Frank Jervis; 3, Mary Lucas.

Carrots—1, Lena Jones; 2, William Morrison; 3, Patricia Bon.

Beets—1, Irvin Quasnoi; 3, Stella Larson; 3, Clarence Cossens.

Turnips—1, William Morrison; 2, Lillian Lucas; 3, William Newman.

Mangels—1, Joan Herring; 2, Hazel Jamieson; 3, Lena Jones.

Peas—1, Ralph Cossens; 2, Clarence Cossens; 3, Lena Cossens.

Cabbages—1, William Cox; 2, Margaret Simpson; 3, Lillian Lucas.

Best Pullet—1, Allan Simpson; 2, Margaret Simpson; 3, Gerald Lee.

(To be continued next week).

Circus Elephant Recaptured in Cranbrook Area Dies

After being held at bay for a week in a small area of heavily timbered mountain-side, five miles south-west of Cranbrook, B.C., the circus elephant Myrtle, which has been roaming in southern British Columbia since she escaped from custody a month ago with four other elephants, died last Friday. Circus men say the death of the animal was due to pneumonia, which it is understood they contract quite easily and which the night, now bordering on the frost line in this altitude, would induce.

The elephant was in a very weakened condition when it was found, and nothing that the circus men could do was of any avail. It was buried out in the bush where it was found, near St. Joseph's creek, and several miles from the nearest road.

Three of the animals were recaptured shortly after they broke away, and the fourth, Charlie, is still at large.

The Churches

THE UNITED CHURCH OF CANADA

Rev. J. R. Geeson, M.A., B.D., Pastor

Services are held as follows:—

A Scoop Shovel, north of Geo. Bolster's, on Sec. 13th. Owner can have same by paying for this advertisement, and applying at Phillips' Elevator. 37a

Former Minister Resents Speech of Camrose M.P.

Senator Jacques Bureau, formerly minister of customs for Canada, commenced action in the supreme court of Alberta last Friday for $100,000 damages from William T. Lucas, recent Progressive member of Parliament for Camrose, and U.F.A. candidate in that riding, the claim being made for alleged libel against the plaintiff during the course of a speech delivered by Mr. Lucas at the Camrose nomination at Stettler on July 30.

The claim was filed on Friday afternoon by Gilroux and Foster, solicitors for Senator Bureaux, who resides at Three Rivers, Quebec.
